**ANIMAL HEALTH REQUIREMENTS FOR RABBITS
TO BE EXPORTED FROM FRANCE TO JAPAN**

Animal health requirements for rabbits to be exported to Japan from France (hereinafter referred to as "the exported rabbits") are applied as follows:

1. The exported rabbits must have been born and raised in France. (Apply this item to rabbits only for breeding or commercial use)
2. There has been no clinical and other evidence of Tularemia, Viral haemorrhagic disease of rabbits and Myxomatosis in all the flocks in which the exported rabbits have been born or raised for at least 12 months prior to shipment to Japan (hereinafter referred to as "the flocks of origin").
3. No rabbits must have been introduced into the flocks of origin for at least 30 days immediately before shipment to Japan. There has been no evidence of animal infectious diseases in the flocks of origin during this period.
4. The exported rabbits must result in no evidence of any animal infectious diseases through the careful clinical inspections conducted by the government authorities of France immediately before shipment to Japan.
5. All the containers and vehicles to be used for transportation of the exported rabbits from the premises in which the exported rabbits have been kept to the place of shipment must be cleared up in advance of loading and be thoroughly disinfected with chemicals approved by the government authorities of France under supervision of the said authorities of France.
6. The government authorities of France must inform the consignor that all other containers, vehicles and loading place of the shipment to be used for transportation of the exported rabbits must be cleared up in advance of loading and be thoroughly disinfected with disinfectants approved by the government authorities of France.
7. The government authorities of France must be responsible for issuing an inspection certificate stating in English the following items in detail.
 - (1) Each requirement of items 1 to 6 mentioned above
 - (2) Name and address of the premises in which the exported rabbits have been stayed prior to shipment
 - (3) Number, breed, age and other information for identification of the exported rabbits
 - (4) Name and address of consignor
 - (5) Name and address of consignee

8. Aside from the items above-mentioned of the said animal health requirements, in case that any contagious disease is detected during the quarantine period in Japan, the exported rabbits that meet these animal health requirements can be returned or destroyed by the animal health authorities in Japan.
