1: Limited to things produced in specific areas. 2: Special conditions apply for Cyprus. 3: May be exported without inspection if net weight is 5kg or less.

About this Chart

- These quarantine requirements apply to the parts of these plants generally used for human consumption (e.g., fruit, stem, or tuber).
- While every effort has been made to ensure the accuracy of the information given in this chart, the quarantine regulations of each country, which forms the basis of this information, may change at anytime without notice. Please also note that quarantine regulations may differ when items are sent as a cargo or by post.
- For information on countries or items not listed, visit the following website, use the QR code, or inquire at the Plant Protection Station.

Explanation of Symbols	⊙	May be exported without inspection
	Q	May be exported subject to passing inspection
	*	May not be exported because importation is prohibited by the destination country; or because special procedures apply (an import permission, disinfection, etc.) which cannot be handled by a regular export inspection. Contact the Plant Protection Station for details.
