

# Changes of radioactive cesium (Cs-134, Cs-137) concentrations in fishery products

	FY2011	FY2012	FY2013	FY2014	FY2015	FY2016	FY2017	FY2018	FY2019
Total count	2777	5655	6932	7943	7797	8001	7724	5470	4796
≥10Bq/kg	2157	2873	1513	940	483	181	44	13	5
Ratio of ≥10Bq/kg (%)	77.67	50.80	21.83	11.83	6.19	2.26	0.57	0.24	0.10

Source : Fisheries Agency, MAFF (<http://www.jfa.maff.go.jp/e/inspection/index.html>), Categories of fishery products: demersal fish, shellfish, seaweed.

Note : Less than 10 Bq/kg (including not detected; ND) samples are not demonstrated. FY : fiscal year, from April 1 to March 31.

- Cesium concentrations in fishery products are decreasing year by year.
- Samples that exceed the Codex guideline level (1000 Bq/kg), were last found in FY2013.
