

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
915	Ecotoxicology	Matozzo V. et al.	2018	Effects of aminomethylphosphonic acid, the main breakdown product of glyphosate, on cellular and biochemical parameters of the mussel <i>Mytilus galloprovincialis</i>	Fish & shellfish immunology (2018), Vol. 83, pp. 321-329	Cellular level parameters discussed in paper, with endpoints that are not relevant to an Annex I renewal from ecotoxicology perspective.
916	Ecotoxicology	Matozzo V. et al.	2019	Glyphosate affects haemocyte parameters in the clam <i>Ruditapes philippinarum</i> .	Marine environmental research (2019), Vol. 146, pp. 66-70	Paper contains data that cannot be related to an EU level ecotoxicology risk assessment.
917	Ecotoxicology	Matozzo V. et al.	2019	Ecotoxicological hazard of a mixture of glyphosate and aminomethylphosphonic acid to the mussel <i>Mytilus galloprovincialis</i> (Lamarck 1819).	Scientific reports (2019), Vol. 9, No. 1, pp. 14302	End-points based on enzyme levels cannot be related to the EU level Annex I risk assessment.
918	Ecotoxicology	Matozzo V. et al.	2018	Ecotoxicological risk assessment for the herbicide glyphosate to non-target aquatic species: A case study with the mussel <i>Mytilus galloprovincialis</i>	Environmental pollution (2018), Vol. 233, pp. 623-632	Molecular level results that are not relatable to an EU level ecotoxicology risk assessment.
919	Ecotoxicology	McNally S. R. et al.	2017	Herbicide application during pasture renewal initially increases root turnover and carbon input to soil in perennial ryegrass and white clover pasture	Plant and soil (2017), Vol. 412, No. 1-2, pp. 133-142	Looks at root turnover as a means of sequestering carbon into soils. No specific endpoints useable in ecotoxicology EU level risk assessment for EU Annex I renewal.
920	Ecotoxicology	McVey K. A. et al.	2016	Exposure of <i>C. elegans</i> eggs to a glyphosate-containing herbicide leads to abnormal neuronal morphology.	Neurotoxicology and teratology (2016), Vol. 55, pp. 23-31	The article does not report results, which can be used for risk assessment and information is insufficient to transfer values into such determinants.
921	Ecotoxicology	Medeiros E. V. d. et al.	2014	Impact of glyphosate on microbial attributes of soil planted with two species of passion fruit.	Revista Caatinga (2014), Vol. 27, No. 1, pp. 1-8	Non-EU soil based comparative experiment to establish the impact of glyphosate on bacterial populations in soil for two different species of passion fruit in Brazil. The test design was described without specific detail on the amount of glyphosate being applied so any impacts could not be related to exposure. Therefore findings cannot be related to an EU level risk assessment for Annex I renewal.
922	Ecotoxicology	Mekhed O. B. et al.	2013	Impact of Water Pollution by Herbicides Zenkor and Roundup on Metabolism in Liver of Fishes of the Fam. Cyprinidae.	Hydrobiological Journal (2013), Vol. 49, No. 5, pp. 74-80	Molecular level results that are not relatable to an EU level ecotoxicology risk assessment.
923	Ecotoxicology	Menendez-Helman R. J. et al.	2015	Subcellular energy balance of <i>Odontesthes bonariensis</i> exposed to a glyphosate-based herbicide.	Ecotoxicology and environmental safety (2015), Vol. 114, pp. 157-63	Molecular level results that are not relatable to an EU level ecotoxicology risk assessment.
924	Ecotoxicology	Menezes C. W. G. et al.	2012	Reproductive and toxicological impacts of herbicides used in <i>Eucalyptus</i> culture in Brazil on the parasitoid <i>Palmistichus elaeis</i> (Hymenoptera: Eulophidae)	Weed research (2012), Vol. 52, No. 6, pp. 520-525	Article not investigating properties of the active substance glyphosate. The articles does not cover any data requirement under EC Regulation 1107/2009.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
925	Ecotoxicology	Mensah P. et al.	2012	Using growth measures in the freshwater shrimp <i>Caridina nilotica</i> as biomarkers of Roundup registered pollution of South African freshwater systems	Physics and Chemistry of the Earth, Parts A/B/C (2012), Vol. 50, pp. 262-268	The formulation is based on MON 2139, which contains MON 0818 (that includes POEA) which is not relevant for the EU representative formulation. The confounding effects of POEA on the results cannot be excluded as no glyphosate technical grade only treatments were included, therefore findings are considered relevant to EU level ecotoxicology risk assessment for Annex I renewal.
926	Ecotoxicology	Mensah P. K. et al.	2012	Acetylcholinesterase activity in the freshwater shrimp <i>Caridina nilotica</i> as a biomarker of Roundup (R) herbicide pollution of freshwater systems in South Africa.	Water Science and Technology (2012), Vol. 66, No. 2, pp. 402-408	Formulation used in the study contains POEA that is not relevant to the EU renewal.
927	Ecotoxicology	Meshkini S. et al.	2019	The acute and chronic effect of Roundup herbicide on histopathology and enzymatic antioxidant system of <i>Oncorhynchus mykiss</i> .	International Journal of Environmental Science and Technology (2019), Vol. 16, No. 11, pp. 6847-6856	Roundup was used which contains POEA. This is not the representative formulation for the Annex I renewal.
928	Ecotoxicology	Mestre A. P. et al.	2019	Effects of cypermethrin (pyrethroid), glyphosate and chlorpyrifos (organophosphorus) on the endocrine and immune system of <i>Salvator merianae</i> (Argentine tegu).	Ecotoxicology and environmental safety (2019), Vol. 169, pp. 61-67	Formulation of glyphosate considered in the paper is not the representative formulation being considered for the Annex I renewal in EU.
929	Ecotoxicology	Meza-Joya F. L. et al.	2013	Toxic, cytotoxic, and genotoxic effects of a glyphosate formulation (Roundup®SL-Cosmoflux®411F) in the direct-developing frog <i>Eleutherodactylus johnstonei</i> .	Environmental and molecular mutagenesis (2013), Vol. 54, No. 5, pp. 362-73	Study is conducted on a formulation of glyphosate that is not the representative formulation in the EU.
930	Ecotoxicology	Miko Z. et al.	2017	Effects of a glyphosate-based herbicide and predation threat on the behaviour of agile frog tadpoles.	Ecotoxicology and environmental safety (2017), Vol. 140, pp. 96-102	The results of the study are not based on direct toxic effects of glyphosate to tadpoles, but are based on the interactive effects in the presence of predators. Endpoints of this type are not used in EU level risk assessment for Annex I renewal purposes.
931	Ecotoxicology	Miko Z. et al.	2017	Standardize or Diversify Experimental Conditions in Ecotoxicology? A Case Study on Herbicide Toxicity to Larvae of Two Anuran Amphibians.	Archives of environmental contamination and toxicology (2017), Vol. 73, No. 4, pp. 562-569	Formulation Glyphogan Classic used in the study contains POEA which is not relevant to an EU level risk assessment for the representative formulation MON 52276 that does not contain POEA.
932	Ecotoxicology	Milan M. et al.	2018	Ecotoxicological effects of the herbicide glyphosate in non-target aquatic species: Transcriptional responses in the mussel <i>Mytilus galloprovincialis</i> .	Environmental pollution (2018), Vol. 237, pp. 442-451	No control data are presented. The concept of up and down-regulation of genes following exposure to glyphosate within the context of a risk assessment is not relatable to the EU renewal. The purity of the test substance is not presented so dosing cannot be confirmed. The environmental conditions of the exposure phase are not presented other than salinity and temperature. No positive control included.
933	Ecotoxicology	Mingo V. et al.	2019	Validating buccal swabbing as a minimal-invasive method to detect pesticide exposure in squamate reptiles.	Chemosphere (2019), Vol. 229, pp. 529-537	This paper describes a novel approach to taking samples from wall lizards for subsequent enzymatic analysis for the detection of pesticide effects. No data were presented that could be used in an EU level RA for renewal. Non representative formulation.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
934	Ecotoxicology	Mona M. H. et al.	2013	Evaluation of cytotoxic effects of atrazine and glyphosate herbicides on <i>Biomphalaria glabrata</i> snails.	Journal of Basic and Applied Zoology (2013), Vol. 66, No. 2, pp. 68-75	Paper discusses a RAPD-PCR technique for detecting genotoxic damage. Formulation tested (Herfosat, Egypt; not characterized/described further). The data are not relatable to an EU level risk assessment for Annex I renewal.
935	Ecotoxicology	Mondal S. et al.	2017	Phytotoxicity of glyphosate in the germination of <i>Pisum sativum</i> and its effect on germinated seedlings.	Environmental health and toxicology (2017), Vol. 32, pp. e2017011	Test design not relevant to EU level ecotoxicological risk assessment for Annex I renewal.
936	Ecotoxicology	Monquero P. A. et al.	2016	Initial growth of tree species under herbicide drift.	Revista de Ciencias Agrarias / Amazonian Journal of Agricultural and Environmental Sciences (2016), Vol. 59, No. 2, pp. 162-172	Direct application to trees is not a proposed use of glyphosate and such end-points are not used in the EE level risk assessment for glyphosate renewal.
937	Ecotoxicology	Monte T. C. C. et al.	2019	Changes in hemocytes of <i>Biomphalaria glabrata</i> infected with <i>Echinostoma paraensei</i> and exposed to glyphosate-based herbicide.	Journal of invertebrate pathology (2019), Vol. 160, pp. 67-75	Relates to snails being exposure to a formulation of glyphosate that is not the representative formulation at Annex I for the EU.
938	Ecotoxicology	Moore L. J. et al.	2012	Relative toxicity of the components of the original formulation of Roundup to five North American anurans.	Ecotoxicology and environmental safety (2012), Vol. 78, pp. 128-33	Whilst the study is well described and data on the formulation and on the surfactant are presented, both test substances are not relevant to the EU renewal of the representative formulation MON52276, which does not contain POEA. Whilst the presented data for these two substances, are supported by the data presented in the paper, there is insufficient information presented to conclude on the assay conducted with the IPA salt of glyphosate. There are no specific biological results presented for anurans exposed to the glyphosate IPA exposure salt in this paper, the finding for the IPA salt can only be considered in a supportive way. All data presented for MON 2139 and MON 0818 are not relevant to the EU level risk assessment of glyphosate for Annex I renewal.
939	Ecotoxicology	Moreira L. F. et al.	2019	Modulation of the multixenobiotic resistance mechanism in <i>Danio rerio</i> hepatocyte culture (ZF-L) after exposure to glyphosate and Roundup (R).	Chemosphere (2019), Vol. 228, pp. 159-165	Epigenetic biomarkers are indicators of the presence of a chemical or mixture of chemicals in the environment. They are not indicators of toxicity. The endpoints presented are not relatable to the ecotoxicological risk assessment required for Annex I renewal in the EU.
940	Ecotoxicology	Morgan M. A. et al.	2019	Evaluating sub-lethal stress from Roundup (R) exposure in <i>Artemia franciscana</i> using H-1 NMR and GC-MS.	Aquatic Toxicology (2019), Vol. 212, pp. 77-87	Formulation used contains POEA - not relevant therefore to EU renewal.
941	Ecotoxicology	Morris A. et al.	2016	Effect of two commercial herbicides on life history traits of a human disease vector, <i>Aedes aegypti</i> , in the laboratory setting.	Ecotoxicology (2016), Vol. 25, No. 5, pp. 863-70	No relevant information on metabolism / residues / background levels of glyphosate. Epidemiology, effect of glyphosate on <i>Aedes aegypti</i> .
942	Ecotoxicology	Mottier A. et al.	2015	Effects of subchronic exposure to glyphosate in juvenile oysters (<i>Crassostrea gigas</i>): From molecular to individual levels.	Marine pollution bulletin (2015), Vol. 95, No. 2, pp. 665-77	Endpoints based on gene expressions are not considered in an ecotoxicology risk assessment for Annex I renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
943	Ecotoxicology	Mugni H. et al.	2014	Acute toxicity of roundup to the nontarget organism <i>Hyaella curvispina</i> . Laboratory and field study	Toxicological and environmental chemistry (2014), Vol. 96, No. 7, pp. 1054-1063	Not the representative formulation for the Annex I therefore not relevant to the risk assessment for Annex I renewal.
944	Ecotoxicology	Munoz L. M. H. et al.	2015	Toxicity assesment of two agrochemicals, roundup active and cosmo-Flux411F, to colombian anuran tadpoles	Acta Biologica Colombiana (2015), Vol. 20, No. 2, pp. 153-161	Roundup Active is based on the potassium salt of glyphosate and contains a different surfactant system compared with the representative formulation for the Annex I EU renewal. It is therefore not relevant to the ecotoxicology risk assessment as effects cannot be related to the representative formulation.
945	Ecotoxicology	Murugan K. et al.	2014	<i>Eudrilus eugeniae</i> - a potent bioremediator in controlling herbicide and pesticide pollution.	International Journal of Pharmaceutical and Biological Archives (2014), Vol. 5, No. 5, pp. 67-74	Paper discusses the use of earthworm as bioremediation organisms to remove glyphosate from the soil. The endpoints presented are not relatable to an EU level risk assessment for Annex I renewal.
946	Ecotoxicology	Murussi C. R. et al.	2016	Exposure to different glyphosate formulations on the oxidative and histological status of <i>Rhamdia quelen</i> .	Fish physiology and biochemistry (2016), Vol. 42, No. 2, pp. 445-55	Findings cannot be related to an EU level ecotoxicology risk assessment
947	Ecotoxicology	Mysore D. K. et al.	2013	Effect of metabolic inhibitors on growth and carotenoid production in <i>Dunaliella bardawil</i> .	Journal of food science and technology (2013), Vol. 50, No. 6, pp. 1130-6	Formulation tested contains tallow amine surfactant - not relevant to EU renewal.
948	Ecotoxicology	Nascentes R. F. et al.	2018	Low doses of glyphosate enhance growth, CO ₂ assimilation, stomatal conductance and transpiration in sugarcane and eucalyptus.	Pest management science (2018), Vol. 74, No. 5, pp. 1197-1205	This paper discusses hormetic responses of sugar cane and eucalyptus plants following exposure to low doses of glyphosate. The exposure situation and the presented endpoint data are not relevant to the EU level renewal of glyphosate
949	Ecotoxicology	Navarro C. D. C. et al.	2014	Effects of the surfactant polyoxyethylene amine (POEA) on genotoxic, biochemical and physiological parameters of the freshwater teleost <i>Prochilodus lineatus</i> .	Comparative biochemistry and physiology. Toxicology & pharmacology (2014), Vol. 165, pp. 83-90	Contains POEA, therefore not relevant to EU renewal.
950	Ecotoxicology	Niemeyer J. C. et al.	2018	Do recommended doses of glyphosate-based herbicides affect soil invertebrates? Field and laboratory screening tests to risk assessment.	Chemosphere (2018), Vol. 198, pp. 154-160	The study is considered not relevant as it is conducted with Roundup Original. Despite the content being 360 g a.e./L, this product in Brazil is based on MON 78087, which contains MON 0818 which is a surfactant system containing POEA. This is not a relevant surfactant for the Annex I submission and therefore data generated using this formulation is not relevant to the EU Annex I renewal process from an ecotoxicology perspective.
951	Ecotoxicology	Nocelli R. C. F. et al.	2019	EFFECTS OF HERBICIDES ON THE SURVIVAL OF THE BRAZILIAN NATIVE BEE <i>Melipona scutellaris</i> LATREILLE, 1811 (HYMENOPTERA: APIDAE)	PLANTA DANINHA (2019), Vol. 37, pp. 1	End-points based on LT50 (time until 50% lethality, are not considered in an EU level bee risk assessment. Exposure scenario is not relevant to the risk assessment as bees were exposed for up to 45 days, being fed continuously and therefore not relatable to an exposure situation in the field.
952	Ecotoxicology	Nur Masirah M. Z. et al.	2013	Effects of selected herbicides on soil microbial populations in oil palm plantation of Malaysia: a microcosm experiment.	African Journal of Microbiology Research (2013), Vol. 7, No. 5, pp. 367-374	Non-EU monitoring study - not relatable to an EU level ecotoxicology risk assessment for Annex I renewal of glyphosate.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
953	Ecotoxicology	Nwani C. D. et al.	2013	Investigation on acute toxicity and behavioral changes in <i>Tilapia zillii</i> due to glyphosate-based herbicide, forceup.	JAPS, Journal of Animal and Plant Sciences (2013), Vol. 23, No. 3, pp. 888-892	The study was not conducted to GLP and a relevant guideline was not followed. The glyphosate formulation used in the study was Forceup and therefore the toxicity of the active substance to this fish species is unclear from this article. There was no rationale for the selection of exposure concentrations presented and no analytical verification of test concentrations was reported during the semi-static test procedure. Due to the test materials not being the representative formulation for the EU renewal, the study is not relevant to the EU level Annex I ecotoxicology risk assessment.
954	Ecotoxicology	Nwani C. D. et al.	2010	Lethal concentration and toxicity stress of Carbosulfan, Glyphosate and Atrazine to freshwater air breathing fish <i>Channa punctatus</i> (Bloch).	International Aquatic Research (2010), Vol. 2, No. 2, pp. 105-111	Glyphosate products used to look at toxicity to Snakehead fish relevant to the Indian subcontinent. Due to the test materials not being the representative formulation for the EU renewal, the study is not relevant to the EU renewal
955	Ecotoxicology	Nweke C. O. et al.	2015	Prediction of phenolic compounds and formulated glyphosate toxicity in binary mixtures using <i>Rhizobium</i> species dehydrogenase activity.	Advances in Life Sciences (2015), Vol. 5, No. 2, pp. 27-38	Mixture study
956	Ecotoxicology	Oliveira Souza C. et al.	2014	Exopolysaccharides and abiotic stress tolerance in bacterial isolates from "sabia" nodules.	Revista Caatinga (2014), Vol. 27, No. 4, pp. 240-245	Paper discusses a novel approach of assessing abiotic stress tolerance in bacterial isolates. Achieved dataset is not relatable to an EU level risk assessment.
957	Ecotoxicology	Olszyk D. et al.	2010	Phytotoxicity assay for seed production using <i>Brassica rapa</i> L.	Integrated environmental assessment and management (2010), Vol. 6, No. 4, pp. 725-34	Development of an assay to look at impact of glyphosate (and other pesticides) on the seed production of plant species with a short life cycle. End-points cannot be used in the regulatory risk assessment of glyphosate.
958	Ecotoxicology	Olszyk D. et al.	2010	Potato (<i>Solanum tuberosum</i>) greenhouse tuber production as an assay for asexual reproduction effects from herbicides.	Environmental toxicology and chemistry (2010), Vol. 29, No. 1, pp. 111-21	Study to look at effect of glyphosate product (and other chemistry) on potato plants asexual reproduction to develop an assay. EC25 values generated for glyphosate and effect on fresh weight on potato tuber and shoot weight. Not relevant to the regulatory risk assessment of glyphosate renewal.
959	Ecotoxicology	Omran N. E. et al.	2016	The endocrine disruptor effect of the herbicides atrazine and glyphosate on <i>Biomphalaria alexandrina</i> snails.	Toxicology and industrial health (2016), Vol. 32, No. 4, pp. 656-65	Cellular level end-points are not relatable to an EU level ecotoxicology assessment for AIR 5.
960	Ecotoxicology	Orsted M. et al.	2015	A fluorescence-based hydrolytic enzyme activity assay for quantifying toxic effects of Roundup (R) to <i>Daphnia magna</i> .	Environmental Toxicology and Chemistry (2015), Vol. 34, No. 8, pp. 1841-1850	Describes a novel fluorescence technique that is not relevant to EU level ecotoxicology risk assessment for Annex I renewal.
961	Ecotoxicology	Orun I. et al.	2013	Effects of acute and chronic exposure to glyphosate on common carp (<i>Cyprinus carpio</i> L.) hematological parameters: the beneficial effect of propolis.	Fresenius Environmental Bulletin (2013), Vol. 22, No. 9, pp. 2504-2509	The article does not report results, which can be used for ecotoxicology risk assessment for Annex I renewal purposes. Contains cellular and molecular findings

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
962	Ecotoxicology	Owagboriaye F. et al.	2020	Biochemical response and vermiremediation assessment of three earthworm species (<i>Alma millsoni</i> , <i>Eudrilus eugeniae</i> and <i>Libyodrilus violaceus</i>) in soil contaminated with a glyphosate-based herbicide.	Ecological Indicators (2020), Vol. 108, pp. 105678	Endpoints based on effects on enzymes levels in earthworms are not used in the EU level ecotoxicology risk assessment for renewal under Annex I. Concerning exposure, based on 83.2g a.i./m ² equivalent, the corresponding application rate per hectare is 832,000 g/ha, equal to 832 kg/ha. This rate far exceeds proposed EU application rate max of 2.16 kg/ha. Therefore findings are difficult to relate to an EU exposure scenario. The product used was also not the representative formulation proposed in the Annex I dossier.
963	Ecotoxicology	Luaces J. P. et al.	2017	Genotoxic effects of Roundup Full II (R) on lymphocytes of <i>Chaetophraetus villosus</i> (Xenarthra, Mammalia): In vitro studies.	PLoS One (2017), Vol. 12, No. 8, pp. Article No. e0182911	Cellular level endpoints cannot be related to the ecotoxicology Annex I renewal risk assessment.
964	Ecotoxicology	Pala A.	2019	The effect of a glyphosate-based herbicide on acetylcholinesterase (AChE) activity, oxidative stress, and antioxidant status in freshwater amphipod: <i>Gammarus pulex</i> (Crustacean).	Environmental science and pollution research international (2019), Vol. 26, No. 36, pp. 36869-36877	Roundup was used which contains POEA. This is not the representative formulation for the Annex I renewal.
965	Ecotoxicology	Panda N. et al.	2016	Herbicides impact on Fe and Mn reduction and dehydrogenase activity in an agricultural soil.	Journal of Crop and Weed (2016), Vol. 12, No. 3, pp. 142-149	Comparative effects on Fe and Mn transformation and dehydrogenase activity in soils are not endpoints used in the EU level ecotoxicology risk assessment for Annex I renewal.
966	Ecotoxicology	Patkowski M. et al.	2016	Response of soil phosphatases to glyphosate and its formulations - Roundup (laboratory conditions).	Plant, Soil and Environment (2016), Vol. 62, No. 6, pp. 286-292	Technical data cannot be related to an EU level Annex I ecotoxicology risk assessment. Formulations used contain POEA.
967	Ecotoxicology	Peel M. D. et al.	2013	Natural Glyphosate Tolerance in Sainfoin (<i>Onyrbrychis viciifolia</i>).	Crop Science (2013), Vol. 53, No. 5, pp. 2275-2282	Paper discusses tolerance to glyphosate a comparison with two plants types. Endpoints specific to EU level ecotoxicology risk assessment are not presented.
968	Ecotoxicology	Pereira J. L. et al.	2018	Effects of glyphosate on the non-target leaf beetle <i>Ceratomya arcuata</i> (Coleoptera: Chrysomelidae) in field and laboratory conditions.	Journal of environmental science and health. Part. B, Pesticides, food contaminants, and agricultural wastes (2018), Vol. 53, No. 7, pp. 447-453	The work was based on populations associated with applications made to glyphosate resistant soybeans. Over the top applications to traited crops are not relevant to the Annex I GAP table. The formulation used was Roundup Original, which contains POEA and is not included in the representative formulation (MON 52276), therefore findings of the study based on a formulation containing POEA are not considered relevant to the EU level RA. for Annex I purposes.
969	Ecotoxicology	Perez-Iglesias J. M. et al.	2016	Effects of glyphosate on hepatic tissue evaluating melanomacrophages and erythrocytes responses in neotropical anuran <i>Leptodactylus latinasus</i> .	Environmental science and pollution research international (2016), Vol. 23, No. 10, pp. 9852-61	Presents cellular and morphological level information that cannot be related to an EU level ecotoxicology risk assessment for Annex I renewal.
970	Ecotoxicology	Persch T. S. P. et al.	2018	Changes in intermediate metabolism and oxidative balance parameters in sexually matured three-barbeled catfishes exposed to herbicides from rice crops (Roundup®), Primoleo® and Facet®).	Environmental toxicology and pharmacology (2018), Vol. 58, pp. 170-179	Relates to snails being exposure to a formulation of glyphosate that is not the representative formulation at Annex I for the EU.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
971	Ecotoxicology	Pfleeger T. et al.	2014	Effects of single and multiple applications of glyphosate or aminopyralid on simple constructed plant communities.	Environmental toxicology and chemistry (2014), Vol. 33, No. 10, pp. 2368-78	This paper looks at response of plant communities following multiple application scenarios across multiple years. Endpoints in terms of plant volume are not relatable to and EU level Ecotoxicology risk assessment for Annex I renewal.
972	Ecotoxicology	Pfleeger T. et al.	2010	Comparing effects of low levels of herbicides on greenhouse- and field-grown potatoes (<i>Solanum tuberosum</i> L.), soybeans (<i>Glycine max</i> L.), and peas (<i>Pisum sativum</i> L.)	Environmental Toxicology and Chemistry (2010), Vol. 30, No. 2, pp. 455-468	Study to compare effects of glyphosate on greenhouse and field grown potatoes, soybean and peas to determine if greenhouse studies are protective of field conditions. Conducted by US EPA. EC25 values generated but as the paper is comparing effect in and outside the greenhouse, the data does not contribute to the regulatory risk assessment of the glyphosate renewal.
973	Ecotoxicology	Piola L. et al.	2013	Comparative toxicity of two glyphosate-based formulations to <i>Eisenia andrei</i> under laboratory conditions.	Chemosphere (2013), Vol. 91, No. 4, pp. 545-51	End-points not relatable to an EU level ecotoxicology risk assessment for Annex I renewal.
974	Ecotoxicology	Pizarro H. et al.	2016	Impact of multiple anthropogenic stressors on freshwater: how do glyphosate and the invasive mussel <i>Limnoperna fortunei</i> affect microbial communities and water quality?.	Ecotoxicology (2016), Vol. 25, No. 1, pp. 56-68	The paper looks at the synergistic effects of glyphosate and freshwater mussels on eutrophication in surface waters. Not relatable to an EU level ecotoxicology risk assessment for Annex I renewal.
975	Ecotoxicology	Pochron S. et al.	2019	Temperature and body mass drive earthworm (<i>Eisenia fetida</i>) sensitivity to a popular glyphosate-based herbicide	Applied soil ecology (2019), Vol. 139, pp. 32-39	Formulation used is not the representative formulation for the Annex I renewal.
976	Ecotoxicology	Poletta G. L. et al.	2017	Biomarkers of Environmental Contamination in Reptile Species: The Effect of Pesticide Formulations on Broad-snouted Caiman <i>Caiman latirostris</i> (Crocodylia, Alligatoridae).	Larramendy, ML [Editor]. (2017) pp. 467-517. Ecotoxicology and Genotoxicology: Non-Traditional Aquatic Models. Publisher: ROYAL SOC CHEMISTRY, ISSN: 1757-7179.	Cellular and molecular level findings cannot be related to an EU level ecotoxicology risk assessment, a book chapter.
977	Ecotoxicology	Polyakova N. N. et al.	2018	Effect of herbicides application on the soil biological activity in the tree nursery	Agrokhimiya (2018), Vol. 12, pp. 35-41	The paper describes the use of buried linen to establish the activity of microorganisms in the soil during a 2 year monitoring period in a tree nursery. The observations cannot be related to an EU level risk assessment as they are based on visual inspection / qualitative assessment of the amount of apparent breakdown of the linen.
978	Ecotoxicology	de Oliveira Procopio S. et al.	2014	Toxicity of herbicides used in the sugarcane crop to diazotrophic bacterium <i>Herbaspirillum seropedicae</i> .	Semina: Ciencias Agrarias (2014), Vol. 35, No. 5, pp. 2383-2398	Paper discusses the impact of glyphosate on cell densities of soil bacteria tested in liquid culture and using novel assay approaches. The endpoints cannot be related to an EU level ecotoxicology risk assessment for renewal.
979	Ecotoxicology	Qin Y. et al.	2017	Toxic effects of glyphosate on diploid and triploid fin cell lines from <i>Misgurnus anguillicaudatus</i> .	Chemosphere (2017), Vol. 180, pp. 356-364	Cellular level endpoints cannot be related to the ecotoxicology Annex I renewal risk assessment.
980	Ecotoxicology	Reddy S. B. et al.	2018	Disturbances in reproduction and expression of steroidogenic enzymes in aquatic invertebrates exposed to components of the herbicide Roundup	Toxicology Research and Application (2018), Vol. 2, pp. 2397847318805276/1	Findings cannot be related to an EU level ecotoxicology risk assessment, as the methods used are not recognised at the EU level.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
981	Ecotoxicology	Reis L. A. C. et al.	2018	Leaf morphoanatomy and biochemical variation on coffee cultivars under drift simulation of glyphosate.	Planta Daninha (2018), Vol. 36, pp. E018143560	Findings not relatable to an EU level ecotoxicology risk assessment for product renewal in the EU.
982	Ecotoxicology	Reno U. et al.	2014	The impact of Eskoba, a glyphosate formulation, on the freshwater plankton community.	Water environment research (2014), Vol. 86, No. 12, pp. 2294-300	Overall the study was well described and conducted partially in accordance with OECD Guideline No. 201. The endpoints measured within the study included survival, age of reproduction, and fecundity. However, validity criteria on mortality was exceeded in the control organisms for several intervals. Analytical measurements were only performed on stock solution. Second part of the study was performed with native micro-crustacean species in Argentina. The test exposure history to the organisms was unknown as they were collected within the local environment. Finally, the glyphosate formulation Eskoba. Due to the test materials not being the representative formulation for the EU renewal, the study is not relevant to the EU level Annex I ecotoxicology risk assessment.
983	Ecotoxicology	Reno U. et al.	2018	Effects of glyphosate formulations on the population dynamics of two freshwater cladoceran species.	Ecotoxicology (2018), Vol. 27, No. 7, pp. 784-793	Formulation used is not the representative formulation for the Annex I renewal.
984	Ecotoxicology	Reno U. et al.	2016	Water polluted with glyphosate formulations: effectiveness of a decontamination process using <i>Chlorella vulgaris</i> growing as bioindicator	Journal of applied phycology (2016), Vol. 28, No. 4, pp. 2279-2286	Study conducted using Roundup ultramax (AKA Mon 78784) that contains surfactants that are different to those used in MON 52276. Therefore findings cannot be related to the ecotoxicology assessment for Annex I renewal for MON 52276
985	Ecotoxicology	Rezende-Silva S. L. et al.	2019	Pouteria torta is a remarkable native plant for biomonitoring the glyphosate effects on Cerrado vegetation	Ecological indicators (2019), Vol. 102, pp. 497-506	Formulation not the representative formulation for the Annex I renewal. Enzymatic endpoints are not relevant to an EU level risk assessment
986	Ecotoxicology	Richard S. et al.	2014	Effect of a glyphosate-based herbicide on gene expressions of the cytokines interleukin-1 β and interleukin-10 and of heme oxygenase-1 in European sea bass, <i>Dicentrarchus labrax</i> L.	Bulletin of environmental contamination and toxicology (2014), Vol. 92, No. 3, pp. 294-9	End-points based on gene expression are not considered in the EU level Annex I ecotoxicology risk assessment for renewal.
987	Ecotoxicology	Robertson C.	2013	The Effects of the Glyphosate-based Herbicide WeatherMax RTM on Sexual Differentiation and Growth in the Wood Frog (<i>Lithobates sylvaticus</i>).	Masters Abstracts International (2013), Vol. 51, No. 06, pp. 171	The formulation used contains a surfactant system that is not relevant to the representative formulation being considered for the Annex I renewal in the EU.
988	Ecotoxicology	Rocha T. L. et al.	2015	Proteomic and histopathological response in the gills of <i>Poecilia reticulata</i> exposed to glyphosate-based herbicide.	Environmental toxicology and pharmacology (2015), Vol. 40, No. 1, pp. 175-86	Observed findings relate to a formulation that is not the representative formulation for the Annex I renewal in the EU.
989	Ecotoxicology	Rodriguez A. M. et al.	2018	Glyphosate Alters Aboveground Net Primary Production, Soil Organic Carbon and Nutrients in Pampean Grasslands (Argentina)	Rangeland ecology & management (2018), Vol. 71, No. 1, pp 119-125	This paper describes multi season monitoring of different habitats in Argentina, the findings of which cannot be related to an EU level risk assessment for Annex I renewal from an ecotoxicology perspective.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
990	Ecotoxicology	Rodriguez-Gil J. L. et al.	2017	Aquatic hazard assessment of MON 0818, a commercial mixture of alkylamine ethoxylates commonly used in glyphosate-containing herbicide formulations. Part 2: Roles of sediment, temperature, and capacity for recovery following a pulsed exposure.	Environmental toxicology and chemistry (2017), Vol. 36, No. 2, pp. 512-521	Contains POEA, therefore not relevant to EU renewal.
991	Ecotoxicology	Romano-Armada N. et al.	2019	Construction of a combined soil quality indicator to assess the effect of glyphosate application.	The Science of the total environment (2019), Vol. 682, pp. 639-649	Paper describes a new approach to establishing the quality of farmland soils by assessing multiple physical, chemical and biological quality factors of soils and attempting to classify these as being of high or low quality based on a known history of glyphosate or no glyphosate application. To this end, the paper does not describe endpoint data that can be related to an EU level Annex I submission.
992	Ecotoxicology	Rondon Neto R. M. et al.	2011	Phytotoxicity of <i>Aspidosperma desmanthum</i> under glyphosate drifting. Fitotoxicidade de peroba-mica (<i>Aspidosperma desmanthum</i>) submetidas a deriva de glyphosate.	Revista Brasileira de Herbicidas (2011), Vol. 10, No. 2, 103 p	The study looks at the toxicity of glyphosate on seedlings of a tree species that is native to South America, Mexico and West Indies. The test substance was Gliz 480 SL (IPA salt). Due to the test materials not being the representative formulation for the EU renewal, the study is not relevant to the EU level Annex I ecotoxicology risk assessment.
993	Ecotoxicology	Roy N. M. et al.	2016	Glyphosate induces neurotoxicity in zebrafish.	Environmental toxicology and pharmacology (2016), Vol. 42, pp. 45-54	Endpoint not used in EU level ecotoxicology risk assessment
994	Ecotoxicology	Ruiz-Toledo J. et al.	2014	Effect of the concentration of glyphosate present in body waters near transgenic soybean fields on the honeybee <i>Apis mellifera</i> , and the stingless bee <i>Tetragonisca angustula</i> . Efecto de la concentracion de glifosato presente en cuerpos de agua cercanos a ca	Acta Zoologica Mexicana (2014), Vol. 30, No. 2, pp. 408-413	Non-EU monitoring study. Extrapolation to EU difficult.
995	Ecotoxicology	Ruuskanen S. et al.	2020	Female Preference and Adverse Developmental Effects of Glyphosate-Based Herbicides on Ecologically Relevant Traits in Japanese Quails.	Environmental science & technology (2020), Vol. 54, No. 2, pp. 1128-1135	Formulation used is not the representative formulation for the Annex I renewal.
996	Ecotoxicology	Saba R. M. et al.	2018	Toxicological and biochemical investigation of certain herbicides on <i>Culex pipiens</i> L. (Diptera: Culicidae) mosquitoes under laboratory conditions	Advances in Natural and Applied Sciences (2018), Vol. 12, No. 2, pp. 6-12	Non-representative formulation (Herbaze 48% EC) was tested. Test organisms were field collected with no knowledge of prior exposure to chemicals. Important information is missing in the material and methods section. The preparation and application of the test solutions as well as the tested concentration range were not reported. The test item is not adequately specified. Although the herbicide formulation is given with a purity of 48 %, it is not clear whether the test concentrations refer to the product or to the active substance. Moreover, the active ingredient is given as glyphosate isopropylamine which should be formulated as a salt resulting in test concentrations as acid equivalents. In addition, the biological results of the test were not sufficiently stated. No

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
						mortality data neither for the test concentrations nor for the controls was given to evaluate the results. Furthermore, there was no analytical verification of test concentrations reported, there is no study guideline and the study is non-GLP and thus the reliability of the study and its relatability to an EU level ecotoxicology risk assessment is questionable.
997	Ecotoxicology	Salbego J. et al.	2014	Glyphosate on digestive enzymes activity in piava (<i>Leporinus obtusidens</i>).	Ciencia Rural (2014), Vol. 44, No. 9, pp. 1603-1607	Study provides information on cellular/molecular level and is no ecotoxicological relevant study
998	Ecotoxicology	Salman J. M. et al.	2016	Effect of pesticide glyphosate on some biochemical features in cyanophyta algae <i>oscillatoria limnetica</i> .	International Journal of PharmTech Research (2016), Vol. 9, No. 8, pp. 355-365	Cellular and molecular level endpoints discussed that are not relevant to EU level ecotoxicology risk assessment.
999	Ecotoxicology	Salvio C. et al.	2016	Survival, Reproduction, Avoidance Behavior and Oxidative Stress Biomarkers in the Earthworm <i>Octolasion cyaneum</i> Exposed to Glyphosate.	Bulletin of environmental contamination and toxicology (2016), Vol. 96, No. 3, pp. 314-9	The earthworm were collected in field in Argentina and acclimatized for 2 weeks. Therefore, the organisms may have had exposure to other chemicals in the field. No information on the field history regarding application of pesticides is known. Analytical measurements of glyphosate were carried out in the short-term bioassay samples. While the test organisms, test design and procedure are well described and all information for the evaluation of the study is given, no endpoint considered relevant for use in risk assessment was determined. Due to the test materials not being the representative formulation for the EU renewal, the study is not relevant to the EU level Annex I ecotoxicology risk assessment.
1000	Ecotoxicology	Samal S. et al.	2019	Setal anomalies in the tropical earthworms <i>Drawida willsi</i> and <i>Lampito mauritii</i> exposed to elevated concentrations of certain agrochemicals: An electron micrographic and molecular docking approach	Environmental technology & innovation (2019), Vol. 15, pp. 100391	Paper describes a electron microscopic approach for establishing effects of pesticides on setal in worms. The findings are not relatable to an EU level ecotoxicological risk assessment.
1001	Ecotoxicology	Samanta P. et al.	2014	Biochemical effects of glyphosate based herbicide, Excel Mera 71 on enzyme activities of acetylcholinesterase (AChE), lipid peroxidation (LPO), catalase (CAT), glutathione-S-transferase (GST) and protein content on teleostean fishes.	Ecotoxicology and environmental safety (2014), Vol. 107, pp. 120-5	Cellular level endpoints cannot be related to the ecotoxicology Annex I renewal risk assessment.
1002	Ecotoxicology	Samanta P. et al.	2014	Evaluation of metabolic enzymes in response to Excel Mera 71, a glyphosate-based herbicide, and recovery pattern in freshwater teleostean fishes.	BioMed research international (2014), Vol. 2014, pp. 425159	Cellular level end-points cannot be related to the ecotoxicology Annex I renewal risk assessment.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1003	Ecotoxicology	Samanta P. et al.	2019	Assessment of adverse impacts of glyphosate-based herbicide, Excel Mera 71 by integrating multi-level biomarker responses in fishes	International Journal of Environmental Science and Technology (2019), Vol. 16, pp. 6291-6300	Molecular level endpoints, associated with biomarker responses are not part of the ecotoxicology risk assessment for fish for an Annex I renewal of a plant protection product in the EU. Observations are not relatable to the EU renewal of glyphosate. Not representative formulation.
1004	Ecotoxicology	Sanchez J. A. A. et al.	2017	Effects of Roundup formulations on biochemical biomarkers and male sperm quality of the livebearing <i>Jenynsia multidentata</i> .	Chemosphere (2017), Vol. 177, pp. 200-210	Formulations contain POEA and therefore not relevant to the EU level ecotoxicological risk assessment for Annex I renewal.
1005	Ecotoxicology	Sani A. et al.	2016	Acute toxicity of herbicide (glyphosate) in <i>Clarias gariepinus</i> juveniles.	Toxicology reports (2016), Vol. 3, pp. 513-515	No information on test substance and test design not recognised. Fish too big for use in study.
1006	Ecotoxicology	Santos S. A. et al.	2019	DIFFERENTIAL TOLERANCE OF CLONES OF <i>Eucalyptus grandis</i> EXPOSED TO DRIFT OF THE HERBICIDES CARFENTHAZONE-ETHYL AND GLYPHOSATE	PLANTA DANINHA (2019), Vol. 37	The study is considered not relevant as it is conducted with Roundup Original. Despite the content being 360 g a.e./L, this product in Brazil is based on MON 78087, which contains MON 0818 which is a surfactant system containing POEA. This is not a relevant surfactant for the Annex I submission and therefore data generated using this formulation is not relevant to the EU Annex I renewal process from an ecotoxicology perspective.
1007	Ecotoxicology	Santric L. et al.	2016	Effects of herbicides on growth and number of actinomycetes in soil and in vitro.	Pesticidi i Fitomedicina (2016), Vol. 31, No. 3/4, pp. 121-128	No endpoints presented that can be used in an EU level ecotoxicology risk assessment for Annex I renewal.
1008	Ecotoxicology	Santric L. et al.	2018	THE EFFECTS OF NICOSULFURON AND GLYPHOSATE ON MICROBIAL ACTIVITY OF DIFFERENT SOILS	PLANTA DANINHA (2018), Vol. 36	Measured parameters are not used in the EU level ecotoxicology assessment for Annex I renewal. It cannot be confirmed that the product used was the representative formulation.
1009	Ecotoxicology	Saunders L. E. et al.	2013	Root-zone glyphosate exposure adversely affects two ditch species.	Biology (2013), Vol. 2, No. 4, pp. 1488-96	The author describes a formulation that is not the representative formulation for the Annex I.
1010	Ecotoxicology	Seguin A. et al.	2017	Sub-lethal effects of a glyphosate-based commercial formulation and adjuvants on juvenile oysters (<i>Crassostrea gigas</i>) exposed for 35 days.	Marine pollution bulletin (2017), Vol. 117, No. 1-2, pp. 348-358	Contains POEA, therefore not relevant to EU renewal.
1011	Ecotoxicology	Shaker B. K. et al.	2018	Effect of exposure to glyphosate pesticide, cadmium and chromium on biomass of algae (<i>Chlorococcum humicola</i> and <i>Chlorella vulgaris</i>) in polluted aqueous culture.	Indian Journal of Public Health Research and Development (2018), Vol. 9, No. 10, pp. 708-713	End-points are based on exposure to both glyphosate and metals and therefore is considered a mixture. Therefore not relevant to EU level risk assessment for glyphosate renewal.
1012	Ecotoxicology	Sharifi Y. et al.	2015	Biodegradation of glyphosate herbicide by <i>Salinicoccus</i> spp isolated from Qom Hoze-soltan lake, Iran	Environmental Health Engineering and Management Journal (2015), Vol. 2, No. 1, pp. 31-36	Paper discusses the potential use of a bacterial strain for biodegrading of glyphosate in a freshwater lake in Iran. Not relevant to the Annex I renewal process in the EU.
1013	Ecotoxicology	Sheehan N. et al.	2018	Glyphosate-containing herbicide impacts physical and behavioral changes during head regeneration in <i>Dugesia</i> (<i>Girardia</i>) <i>tigrina</i>	Bios (2018), Vol. 89, No. 1, pp. 14-22	Formulation used is not the representative formulation for the Annex I renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1014	Ecotoxicology	Shimina V. S. et al.	2010	Effect of Herbicide Excel Mera-71 (Glyphosate) Treatment on Seed Germination and Early Seedling Growth of Black Gram (<i>Vigna mungo</i> , Hepper.) var. T-9.	Advances in Plant Sciences (2010), Vol. 23, No. 2, pp. 515-518	Conducted in India, GLY product used to look at the toxicity to germination, seedling growth in seedlings of black gram. Endpoint not relevant for the regulatory renewal of GLY.
1015	Ecotoxicology	Shiogiri N. S. et al.	2012	Acute exposure of a glyphosate-based herbicide affects the gills and liver of the Neotropical fish, <i>Piaractus mesopotamicus</i> .	Environmental toxicology and pharmacology (2012), Vol. 34, No. 2, pp. 388-396	Formulations contain POEA and therefore not relevant to the EU level ecotoxicology risk assessment for Annex I renewal.
1016	Ecotoxicology	Sikorski L. et al.	2019	The effects of glyphosate-based herbicide formulations on <i>Lemna minor</i> , a non-target species	Aquatic Toxicology (2019), Vol. 209, pp.70-80	Difficult to relate the findings to an EU level risk assessment for Annex I renewal as the study was conducted on a non-EU tree species.
1017	Ecotoxicology	Silveira T. et al.	2019	Roundup® Herbicide Decreases Quality Parameters of Spermatozoa of <i>Silversides Odontesthes Humensis</i>	Bulletin of Environmental Contamination and Toxicology (2019), Vol. 102, No. 1	Observations cannot be related to an ecotoxicology risk assessment for EU renewal of glyphosate.
1018	Ecotoxicology	Simoes T. et al.	2019	Fate and effects of two pesticide formulations in the invertebrate <i>Folsomia candida</i> using a natural agricultural soil.	The Science of the total environment (2019), Vol. 675, pp. 90-97	The formulation used (MONTANA) contains POEA which is not relevant to the EU level ecotoxicology risk assessment for Annex I renewal.
1019	Ecotoxicology	Simoes T. et al.	2018	An integrative omics approach to unravel toxicity mechanisms of environmental chemicals: effects of a formulated herbicide	Scientific Reports (2018), Vol. 8, No. 1, pp. 1-12	Study investigates the impact of a glyphosate formulation that contains POEA on <i>Folsomia</i> . This is not the formulated product for the renewal and POEA is no longer used in the EU.
1020	Ecotoxicology	Siroski P. A. et al.	2016	Immunotoxicity of commercial-mixed glyphosate in broad snouted caiman (<i>Caiman latirostris</i>).	Chemico-biological interactions (2016), Vol. 244, pp. 64-70	Monitoring endpoints not relevant to EU level ecotoxicology risk assessment
1021	Ecotoxicology	Siti Hanisah Zahuri et al.	2014	Toxicity testing of three commonly used herbicides on soil-dwelling ant (Family: Formicidae - <i>Odontomachus simillimus</i>).	Borneo Journal of Resource Science and Technology (2014), Vol. 4, No. 1, pp. 28-33	Review, secondary information.
1022	Ecotoxicology	Smedbol E. et al.	2018	Effects of low concentrations of glyphosate-based herbicide factor 540A® on an agricultural stream freshwater phytoplankton community	Chemosphere (2018), Vol. 192, pp. 133-141	Test substance not glyphosate or its metabolites. Paper presented based on a formulation of glyphosate that is not the representative formulation being considered for the Annex I renewal.
1023	Ecotoxicology	Smedbol E. et al.	2017	Phytoplankton growth and PSII efficiency sensitivity to a glyphosate-based herbicide (Factor 540(®)).	Aquatic toxicology (2017), Vol. 192, pp. 265-273	Achieved end-points are not relatable to an EU level ecotoxicology risk assessment for Annex I renewal.
1024	Ecotoxicology	Smith C. M. et al.	2019	Developmental and epigenetic effects of Roundup and glyphosate exposure on Japanese medaka (<i>Oryzias latipes</i>).	Aquatic toxicology (2019), Vol. 210, pp. 215-226	Single application rates for glyphosate active substance considered. No specific endpoints presented that could be applied to an EU level ecotoxicology risk assessment for Annex I renewal.
1025	Ecotoxicology	Soloneski S. et al.	2016	Genotoxic effect of a binary mixture of dicamba- and glyphosate-based commercial herbicide formulations on <i>Rhinella arenarum</i> (Hensel, 1867) (Anura, Bufonidae) late-stage larvae.	Environmental science and pollution research international (2016), Vol. 23, No. 17, pp. 17811-21	Despite LC50 data being present that could inform on the risk assessment - the formulation used (Credit®) is based on MON 35085, which is a 360 g/L formulation containing MON 0818, which contains POEA. These findings are therefore not relevant to the EU renewal as MON 52276 does not contain POEA.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1026	Ecotoxicology	Sribanjam S. et al.	2018	Toxic effects of the herbicide glyphosate on enzymes activities and histopathological changes in gill and liver tissue of freshwater fish, Silver barb (<i>Barbonymus gonionotus</i>)	Bioscience Research (2018), Vol. 15, No. 2, pp. 1251-1260	Data presented cannot be related to an EU level ecotoxicology risk assessment for Annex I renewal purposes. Roundup contains POEA which is not present in the representative formulation for the renewal.
1027	Ecotoxicology	Stefanello Junior G. J. et al.	2011	Selectivity of herbicides registered for corn at the immature stages of <i>Trichogramma pretiosum</i> (Hymenoptera: Trichogrammatidae). Seletividade de herbicidas registrados para a cultura do milho aos estadios imaturos de <i>Trichogramma pretiosum</i> (Hymenoptera:	Planta Daninha (2011), Vol. 29, pp. 1069-1077	Test species was parasitoid <i>T. pretiosum</i> in different immature stages (egg-larva, pre-pupal and pupal stages). However, the test solutions were sprayed onto egg-cards containing the parasitised eggs. Therefore this is not an adequate route of exposure and thus not relevant for the risk assessment.
1028	Ecotoxicology	Stenoien C. et al.	2018	Monarchs in decline: a collateral landscape-level effect of modern agriculture. Special Section: The impact of transgenic crops on protected arthropods.	Insect Science (2018), Vol. 25, No. 4, pp. 528-541	Concerns a review of the decline of monarch butterflies in the US. Not relatable to an EU level assessment for Annex I renewal.
1029	Ecotoxicology	Sulukan E. et al.	2017	An approach to clarify the effect mechanism of glyphosate on body malformations during embryonic development of zebrafish (<i>Danio rerio</i>).	Chemosphere (2017), Vol. 180, pp. 77-85	Endpoints are not relatable to an EU level risk assessment for Annex I renewal.
1030	Ecotoxicology	Sun K.-F. et al.	2013	Ecological risks assessment of organophosphorus pesticides based on response of <i>Scenedesmus quadricauda</i> .	China Environmental Science (2013), Vol. 33, No. 5, pp. 868-873	Endpoints not relevant to an EU level ecotoxicology risk assessment as they are not relatable.
1031	Ecotoxicology	Sun K.-F. et al.	2013	Ecological risks assessment of organophosphorus pesticides on bloom of <i>Microcystis wesenbergii</i>	International biodeterioration & biodegradation (2013), Vol. 77, pp. 98-105	Endpoints measured are not relevant or relatable to an EU level Annex I ecotoxicological risk assessment.
1032	Ecotoxicology	Sushilkumar et al.	2017	Herbicides effect on fish mortality and water quality in relation to chemical control of alligator weed.	Indian Journal of Weed Science (2017), Vol. 49, No. 4, pp. 396-400	Methods and end-points not relatable to EU level ecotoxicology assessment for renewal purposes.
1033	Ecotoxicology	Sushilkumar et al.	2017	Chemical control of duck weed and its effect on water quality and residue.	Indian Journal of Weed Science (2017), Vol. 49, No. 1, pp. 105-107	Difficult to relate observed findings to an EU level risk assessment for Annex I renewal.
1034	Ecotoxicology	Tang Y. et al.	2014	The influence of three different types of herbicides on biodiversity	Advanced Materials Research (2014), Vol. 838-841, pp. 2417-2426	Information presented is not directly relevant to the ecotoxicology risk assessment for Annex I renewal
1035	Ecotoxicology	Tapkir S. D. et al.	2019	Impact, recovery and carryover effect of Roundup® on predator recognition in common spiny loach, <i>Lepidocephalichthys thermalis</i> .	Ecotoxicology (2019), Vol. 28, No. 2, pp. 189-200	The formulation is not the representative formulation being used for the Annex I. Its identity cannot be confirmed. The observed effects based on reactions to non-specific alarms / cues cannot be related to an EU level ecotoxicology risk assessment for Annex I renewal.

1040	Ecotoxicology	Udeh G. N. et al.	2014	Behavioural and some physico-chemical assessment of fresh water catfish <i>Clarias gariepinus</i> (Burchell, 1822) exposed to acute concentrations of Delsate® herbicide (glyphosate).	Journal of Aquatic Sciences (2014), Vol. 29, No. 2, pp. 275-283	Contains a surfactant system that is not relevant to the EU level ecotoxicology risk assessment for renewal of MON 52276 onto Annex I.
1041	Ecotoxicology	Ujszegi J. et al.	2015	No observable effect of a glyphosate-based herbicide on two top predators of temporal water bodies.	Environmental toxicology and chemistry (2015), Vol. 34, No. 2, pp. 307-13	The test substance contains polyethoxylated tallowamine surfactant, which is not allowed in herbicidal formulations in the EU. Due to the test materials not being the representative formulation for the EU renewal, the study is not relevant to the EU level Annex I ecotoxicology risk assessment.
1042	Ecotoxicology	Ujszegi J. et al.	2016	NO EFFECT OF A GLYPHOSATE-BASED HERBICIDE ON LARVAL DRAGONFLIES (<i>Aeshna cyanea</i>) AND ADULT NEWTS (<i>Lissotriton vulgaris</i>) IN A LABORATORY-BASED EXPERIMENT.	Acta Zoologica Academiae Scientiarum Hungaricae (2016), Vol. 62, No. 4, pp. 355-367	The test substance contains polyethoxylated tallowamine surfactant, which is not allowed in herbicidal formulations in the EU. Due to the test materials not being the representative formulation for the EU renewal, the study is not relevant to the EU level Annex I ecotoxicology risk assessment.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1043	Ecotoxicology	Vajargah M. F. et al.	2018	Acute toxicity effect of glyphosate on survival rate of common carp, <i>Cyprinus carpio</i>	Environmental Health Engineering and Management Journal (2018), Vol. 5, No. 2, pp. 61-66	Non-representative formulation (Glyphosate Aria 41% SL) was tested. The test conditions throughout the whole exposure period were not documented. No information on source and composition of test media reported. There was no analytical verification of test concentrations reported and the study is not conducted according to a recognised test guideline. No validity criteria are stated so the validity of the study cannot be confirmed. The size of the fish used in the test results in a fish loading rate of 1.23 g fish/Litre, which exceeds the loading rate required by internationally recognised fish testing guidelines. The testing design is not properly described i.e. whether a static, static renewal or flow through test design was used. The water quality parameters measured would suggest that the environmental conditions were maintained for the exposure duration, although this can also not be confirmed from the information presented. The water temperature being maintained at 26±1 °C, exceeds the upper temperature limit for testing with <i>Cyprinus carpio</i> (24 °C).
1044	Ecotoxicology	Vannini A. et al.	2016	Bioaccumulation, physiological and ultrastructural effects of glyphosate in the lichen <i>Xanthoria parietina</i> (L.) Th. Fr.	Chemosphere (2016), Vol. 164, pp. 233-240	Article discusses the use of lichens as a bioindicator model of glyphosate exposure. Not relatable to an EU level ecotoxicology risk assessment for the renewal of Glyphosate onto Annex I in the EU.
1045	Ecotoxicology	Veeraiah K. et al.	2015	Impact of glyphosate on biochemical constituents of the freshwater fish, <i>catla catla</i>	International Journal of Bioassays (2015), Vol. 4, No. 7, pp. 4139-4144	Formulation is not the representative formulation for the Annex I renewal.
1046	Ecotoxicology	Vera M. S. et al.	2012	Direct and indirect effects of the glyphosate formulation Glifosato Atanor® on freshwater microbial communities.	Ecotoxicology (2012), Vol. 21, No. 7, pp. 1805-16	On review of the paper, the findings of the study conducted in Argentina were difficult to relate to the EU level ecotoxicology risk assessment. The formulation used differs to the representative formulation for the Annex I in the EU.
1047	Ecotoxicology	Vera-Candioti J. et al.	2013	Evaluation of the genotoxic and cytotoxic effects of glyphosate-based herbicides in the ten spotted live-bearer fish <i>Cnesterodon decemmaculatus</i> (Jenyns, 1842).	Ecotoxicology and environmental safety (2013), Vol. 89, pp. 166-73	Formulations used are not relevant to the Annex I renewal of glyphosate in the EU.
1048	Ecotoxicology	Verderame M. et al.	2019	How Glyphosate Impairs Liver Condition in the Field Lizard <i>Podarcis siculus</i> (Rafinesque-Schmaltz, 1810): Histological and Molecular Evidence.	BioMed research international (2019), Vol. 2019, pp. 4746283	Sub-lethal endpoints based on blood chemistry analysis are not relatable to an EU level Annex I risk assessments.
1049	Ecotoxicology	Viti M. L. et al.	2019	Translocation and Root Exudation of Glyphosate by <i>Urochloa brizantha</i> and its Transport on Sugarcane and Citrus Seedlings	Planta Daninha (2019), Vol. 37	Paper discusses the translocation potential of glyphosate via the root zone, after application to palisade grass planted in association with sugar-cane. No endpoints relevant for an EU level ecotoxicology assessment.
1050	Ecotoxicology	Vllasaku I. et al.	2018	Investigation of genotoxic effect of herbicide Randap 480 ec at goldfish (<i>Carassius auratus</i>)	International Journal of Pharmaceutical Sciences Review and Research (2018), Vol. 48, No. 1, pp. 7/1-7/3	Identity of the formulated product used is not the same as the representative formulation being considered for the Annex I.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1051	Ecotoxicology	Voeroes M. et al.	2019	Influence of agro-environmental pollutants on a biocontrol strain of <i>Bacillus velezensis</i>	MicrobiologyOpen (2019), Vol. 8, No. 3, pp. e660	This paper discusses the impact of glyphosate on pesticide resistance strains of biocontrol agents. This is not considered relevant to an EU level ecotoxicology risk assessment for EU Annex I renewal.
1052	Ecotoxicology	Vrisman C. M. et al.	2014	Influence of herbicides and fungicides in the carpogenic germination of sclerotia of <i>Sclerotinia sclerotiorum</i> (Lib.) de Bary. Influencia de herbicidas e fungicidas na germinacao carpogenica de esclerodios de <i>Sclerotinia sclerotiorum</i> (Lib.) de Bary.	Bioscience Journal (2014), Vol. 30, No. 2, pp. 477-483	Study describes the impact of multiple pesticides on the germination of <i>Sclerotinia sclerotiorum</i> - a soil fungus. The end-points are not useable in an EU level Annex ecotox risk assessment. 400 L/ha (if this were the representative formulation) would be equivalent to 1440 kg/ha significantly higher than any application rate proposed. Therefore this is not relatable to EU level ecotoxicology risk assessment.
1053	Ecotoxicology	Wagner N. et al.	2013	Effects of water contamination on site selection by amphibians: experiences from an arena approach with European frogs and newts.	Archives of environmental contamination and toxicology (2013), Vol. 65, No. 1, pp. 98-104	Novel choice / avoidance end-point data are not considered as part of an EU level ecotoxicology risk assessment for Annex I renewal.
1054	Ecotoxicology	Wagner N. et al.	2017	Population and life-stage-specific effects of two herbicide formulations on the aquatic development of European common frogs (<i>Rana temporaria</i>).	Environmental toxicology and chemistry (2017), Vol. 36, No. 1, pp. 190-200	The study was not conducted according to GLP, but it is well documented and in accordance with an ASTM standard protocol. The authors state that in all 3 breeding ponds, glyphosate was detected but not aminomethylphosphonic. However, the non-EU representative glyphosate formulation, Roundup® UltraMax, was tested. Therefore the study only provides supportive information.
1055	Ecotoxicology	Wagner N. et al.	2017	Effects of a commonly used glyphosate-based herbicide formulation on early developmental stages of two anuran species.	Environmental science and pollution research international (2017), Vol. 24, No. 2, pp. 1495-1508	Not the representative formulation for the Annex I renewal. Therefore not relevant to EU renewal.
1056	Ecotoxicology	Wagner N. et al.	2017	Corrigendum [Erratum to document cited in CA166:057881]	Environmental Toxicology and Chemistry (2017), Vol. 36, No. 1, pp. 276	This is a corrigendum for an article (No. 2248), which is classified as non-relevant.
1057	Ecotoxicology	Wang F. et al.	2014	Acute Toxicity and Oxidative Stress of Two Herbicides on Earthworm <i>Eisenia fetida</i> .	Asian Journal of Ecotoxicology (2014), Vol. 9, No. 6, pp. 1210-1218	The achieved acute end-points are not considered relevant to an EU level ecotox risk assessment for renewal purposes.
1058	Ecotoxicology	Wang Y. et al.	2013	Joint Toxicity of Arsenic, Glyphosate and Dichlorvos to <i>C. elegans</i> .	Asian Journal of Ecotoxicology (2013), Vol. 8, No. 2, pp. 262-267	Mixture study with arsenic.
1059	Ecotoxicology	Wang Y. et al.	2014	Toxicological effects of glyphosate to <i>Pyramidomonas delicatula</i> and <i>Alexandrium tamarense</i> in water environment	Nongyao (2014), Vol. 53, No. 1, pp. 45-48	End-points are not relatable to an EU level Annex I ecotoxicology risk assessment.
1060	Ecotoxicology	Wang Y. et al.	2012	Acute Toxicity of Twenty-Two Commonly Used Herbicides to Earthworm (<i>Eisenia fetida</i>).	Asian Journal of Ecotoxicology (2012), Vol. 7, No. 3, pp. 317-325	The achieved acute endpoints are not considered relevant to an EU level ecotoxicology risk assessment for renewal purposes.
1061	Ecotoxicology	Watts C. et al.	2016	Responses of invertebrates to herbicide in <i>Salix cinerea</i> invaded wetlands: Restoration implications	Ecological management & restoration (2016), Vol. 17, No. 3, pp. 243-249	Non-EU monitoring study. Extrapolation to EU is difficult.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1062	Ecotoxicology	Webster T. M. U. et al.	2015	Global transcriptomic profiling demonstrates induction of oxidative stress and of compensatory cellular stress responses in brown trout exposed to glyphosate and Roundup.	BMC Genomics (2015), Vol. 16, No. 32	No data relevant to the EU data requirements is presented and therefore does not support the EU level renewal of glyphosate.
1063	Ecotoxicology	Wech J. et al.	2018	The effect of willow control using a glyphosate formulation on aquatic invertebrates within a New Zealand wetland	New Zealand journal of marine and freshwater research (2018), Vol. 52, No. 1, pp. 16-41	Multi-year environmental monitoring project conducted in New Zealand. Not relatable to EU level risk assessment.
1064	Ecotoxicology	Weeks Santos S. et al.	2019	A glyphosate-based herbicide induces sub-lethal effects in early life stages and liver cell line of rainbow trout, <i>Oncorhynchus mykiss</i> .	Aquatic toxicology (2019), Vol. 216, pp. 105291	Non-standard test design and results that cannot be related to an EU level risk assessment for EU renewal purposes.
1065	Ecotoxicology	Wrin K. M. et al.	2012	Predator cues and an herbicide affect activity and emigration in an agrobiont wolf spider.	Chemosphere (2012), Vol. 87, No. 4, pp. 390-6	Discusses results of experiments conducted using a formulation of glyphosate that contains POEA. Not relevant to EU risk assessment.
1066	Ecotoxicology	Wu L. et al.	2016	Physiological effects of the herbicide glyphosate on the cyanobacterium <i>Microcystis aeruginosa</i> .	Aquatic toxicology (2016), Vol. 178, pp. 72-9	End-points presented cannot be used in the EU level renewal risk assessment for glyphosate from an ecotoxicology perspective.
1067	Ecotoxicology	Yadav S. S. et al.	2013	Toxic and genotoxic effects of Roundup on tadpoles of the Indian skittering frog (<i>Euflyctis cyanophlyctis</i>) in the presence and absence of predator stress.	Aquatic toxicology (2013), Vol. 132-133, pp. 1-8	The Roundup formulation tested contains POEA, therefore not relevant to the EU level Annex I renewal from an ecotoxicology perspective.
1068	Ecotoxicology	Yang Z. et al.	2018	Toxic effects of four commonly-used agrochemicals on <i>Arma chinensis</i> and <i>Picromerus lewisi</i> .	Agricultural Biotechnology (2018), Vol. 7, No. 5, pp. 153-155, 158	Test item is a glyphosate formulation that is not the representative formulation for the Annex I renewal.
1069	Ecotoxicology	Ye J. et al.	2019	The Growth, Apoptosis and Oxidative Stress in <i>Microcystis viridis</i> Exposed to Glyphosate.	Bulletin of environmental contamination and toxicology (2019), Vol. 103, No. 4, pp. 585-589	Achieved end-points are not releatable to an EU level ecotoxicology assessment for Annex I renewal.
1070	Ecotoxicology	Yousaf S. et al.	2013	Effect of Pesticides on the Soil Microbial Activity.	Pakistan Journal of Zoology 2013), Vol. 45, No. 4, pp. 1063-1067	Achieved end-points are not relevant to an EU level risk assessment. Novel test design with no positive control and cannot confirm dose.
1071	Ecotoxicology	Zabaloy M. C. et al.	2016	Soil ecotoxicity assessment of glyphosate use under field conditions: microbial activity and community structure of Eubacteria and ammonia-oxidising bacteria.	Pest management science (2016), Vol. 72, No. 4, pp. 684-91	Findings are not relateable to an EU level ecotoxicology risk assessment for Annex I renewal purposes.
1072	Ecotoxicology	Zabotkina E. A. et al.	2016	The changes of the immunocompetent cells ultrastructure in the kidney, spleen and liver in Amur sleeper <i>Perccottus glenii</i> at the influence of pesticide Roundup.	Trudy VNIRO (2016), Vol. 162, pp. 73-81	Article cannot be related to an EU level ecotoxicology risk assessment, as exposure levels cannot be confirmed and there are no end-points presented that could be used in an ecotoxicology assessment. The paper describes sub-lethal effects / morphological changes in the structure of mitochondria.
1073	Ecotoxicology	Zain N. M. M. et al.	2013	Growth-inhibitory Effects of Herbicides on Soil Bacterial Population in Oil Palm Plantation	Journal of Pure and Applied Microbiology (2013), Vol. 7, No. 3, pp. 1799-1808	Paper describes mixture toxicity on soil communities of four pesticides, therefore not relevant to single active substance formulation for EU renewal. onto Annex i

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1074	Ecotoxicology	Zaller J. G. et al.	2018	Herbicides in vineyards reduce grapevine root mycorrhization and alter soil microorganisms and the nutrient composition in grapevine roots, leaves, xylem sap and grape juice.	Environmental science and pollution research international (2018), Vol. 25, No. 23, pp. 23215-23226	Study conducted using a formulation that is not the representative formulation for the Annex I renewal.
1075	Ecotoxicology	Zaller J. G. et al.	2014	Glyphosate herbicide affects belowground interactions between earthworms and symbiotic mycorrhizal fungi in a model ecosystem.	Scientific reports (2014), Vol. 4, pp. 5634	Formulation used was Roundup which contains POEA, the latter that is not relevant in the EU.
1076	Ecotoxicology	Zantedeschi R. et al.	2018	Selectivity of pesticides registered for soybean crop on <i>Telenomus podisi</i> and <i>Trissolcus basalus</i> .	Pesquisa Agropecuaria Tropical (2018), Vol. 48, No. 1, pp. 52-58	Test substance identity and level of exposure cannot be confirmed by the details presented in the paper.
1077	Ecotoxicology	Zebral Y. D. et al.	2018	A glyphosate-based herbicide reduces fertility, embryonic upper thermal tolerance and alters embryonic diapause of the threatened annual fish <i>Austrolebias nigrofasciatus</i> .	Chemosphere (2018), Vol. 196, pp. 260-269	The paper relates to the product Transorb R and not the representative formulation for the Annex I renewal. The presented data are not considered relevant for use in risk assessment as they are single rates and not derived end-points.
1078	Ecotoxicology	Zhang M. et al.	2018	Effects of nitrification inhibitor and herbicides on nitrification, nitrite and nitrate consumptions and nitrous oxide emission in an Australian sugarcane soil	Biology and fertility of soils (2018), Vol. 54, No. 6, pp. 697-706	The paper describes the influence of a nitrification inhibitor on soil functional process when exposed to herbicides. This is a comparative assessment study that is difficult to relate to an Annex I ecotoxicology risk assessment.
1079	Ecotoxicology	Zhang Q. et al.	2016	Effects of glyphosate at environmentally relevant concentrations on the growth of and microcystin production by <i>Microcystis aeruginosa</i> .	Environmental monitoring and assessment (2016), Vol. 188, No. 11, pp. 632	This study presents cellular and molecular findings that are not relatable to the EU level ecotoxicology risk assessment for Annex I renewal.
1080	Ecotoxicology	Zhang Q. et al.	2015	Effects of glyphosate on <i>Microcystis aeruginosa</i> growth and related mechanisms	Anhui Nongye Kexue (2015), Vol. 43, No. 36, pp. 157-159	There are no end-points presented that could be used in an EU level ecotoxicology risk assessment.
1081	Ecotoxicology	Zhang Z. et al.	2016	Acute toxicity and risk assessment of paraquat aqueous solution and its 9 alternative products to <i>Bombyx mori</i>	Canye Kexue (2016), Vol. 42, No. 3, pp. 483-487	The dipping technique for leaf exposure is not a recognized EU approach for toxicity testing. Not relevant to an EU level Annex I ecotoxicology risk assessment.
1082	Ecotoxicology	Zhao J. et al.	2013	Non-target effects of herbicides on soil nematode assemblages	Pest Management Science (2013), Vol. 69, No. 6, pp. 679-684	Paper discusses a soil nematode meta-analysis with no supported data presented. The resulting analysis cannot be related to an EU level Annex I risk assessment.
1083	Ecotoxicology	Zhelezova A. D. et al.	2018	STRUCTURAL AND FUNCTIONAL CHARACTERISTICS OF PROKARYOTIC COMPLEX OF SOD-PODZOLIC SOIL INFLUENCED BY HERBICIDE GLYPHOSATE	Vestnik Moskovskogo Universiteta Seriya 17 Pochvovedenie (2018), No. 2, pp. 48-54	This is a medium to long term soil bacteria monitoring study. There are no quantifiable end-points presented nor exposure levels defined that can be related to an EU level ecotoxicology risk assessment for renewal purposes. Despite glyphosate being mentioned in the title / abstract, there is no information about glyphosate (rates used / source / purity etc.) in the paper.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1084	Ecotoxicology	Zhong G. et al.	2018	Responses of Hydrilla verticillata (L.f.) Royle and Vallisneria spiralis (L.) L. to glyphosate exposure	Chemosphere (2018), Vol. 193, pp. 385-393	The paper describes enzymatic levels in aquatic plants that cannot be related to an EU level risk assessment for EU renewal.
1085	Ecotoxicology	Zhou C. et al.	2014	Inhibition effect of glyphosate on the acute and subacute toxicity of cadmium to earthworm Eisenia fetida.	Environmental toxicology and chemistry (2014), Vol. 33, No. 10, pp. 2351-7	This paper looked at the impact of GBH in combination with cadmium in soil on earthworm toxicity. This study was a mixture assessment and thus not considered relevant for the Annex I renewal of a single a.i. containing the representative formulation for Annex I renewal.
1086	Ecotoxicology	Zhou C. et al.	2012	Does glyphosate impact on Cu uptake by, and toxicity to, the earthworm Eisenia fetida?	Ecotoxicology (2012), Vol. 21, No. 8, pp. 2297-305	This paper looked at the impact of GBH in combination with copper in soil on earthworm toxicity. This study was a mixture assessment and thus not considered relevant for the Annex I renewal of a single a.i. containing the representative formulation for Annex I renewal.
1087	Ecotoxicology	Zhu X. et al.	2016	Herbicides interfere with antigrazer defenses in Scenedesmus obliquus.	Chemosphere (2016), Vol. 162, pp. 243-51	This paper discusses sub-lethal impacts of glyphosate on colonising activity of Scenedesmus. The end-points are not relevant to the EU level ecotoxicology risk assessment for Annex I renewal.
1088	Ecotoxicology	Zhu Y. C. et al.	2017	Feeding toxicity and impact of imidacloprid formulation and mixtures with six representative pesticides at residue concentrations on honey bee physiology (Apis mellifera).	PloS one (2017), Vol. 12, No. 6, pp. e0178421	This study summarises that there were no effects on bees from glyphosate exposure alone. When mixed with other pesticides, effects observed, but as this is based on mixtures, it is not relevant to EU level ecotoxicology risk assessment for single active containing formulation for Annex I renewal in the EU.
1089	Fate and behaviour in the environment	Adelowo F. E. et al.	2014	Biodegradation of Glyphosate by Fungi Species	Advances in Bioscience and Bioengineering (2014), Vol. 2, No. 1, pp. 104	Degradation of glyphosate by fungal isolates from Nigerian soil not relevant to EU risk assessment.
1090	Fate and behaviour in the environment	Ahmed S. et al.	2011	Influence of parameters on the heterogeneous photocatalytic degradation of pesticides and phenolic contaminants in wastewater: A short review.	Journal of Environmental Management (2011), Vol. 92, No. 3, pp. 311-330	This paper is a literature review with no experimental data provided. Investigation of specific methods of wastewater treatment are also not relevant to the data requirements
1091	Fate and behaviour in the environment	Allinson G. et al.	2016	Pesticide and trace metals in surface waters and sediments of rivers entering the Corner Inlet Marine National Park, Victoria, Australia.	Environmental science and pollution research international (2016), Vol. 23, No. 6, pp. 5881-91	No glyphosate analysis included in paper.

Acta Scientiarum Technology (2014), Vol. 36, No. 3, pp. 513-519	Development of glyphosate analytical method and demonstration of the method through analysis of public water supply samples from Brazil. Not relevant to EU risk assessment.
1118	Fate and behaviour in the environment	dos Santos S. C. et al.	2014	Development of electroanalytical methodology for determination of pesticide glyphosate in environmental samples	Revista Virtual de Quimica (2014), Vol. 6, No. 4, pp. 866-883	Mainly analytical method. Only one natural sample collected and analyzed to demonstrate method.
1119	Fate and behaviour in the environment	Erban T. et al.	2018	The different behaviors of glyphosate and AMPA in compost-amended soil	Chemosphere (2018), Vol. 207, pp. 78-83	Effect of compost amendment on dissipation of glyphosate and AMPA in Czech soil after multiple glyphosate applications. Not relevant to EU risk assessment.
1120	Fate and behaviour in the environment	Ermakova I. T. et al.	2010	Bioremediation of glyphosate-contaminated soils.	Applied microbiology and biotechnology (2010), Vol. 88, No. 2, pp. 585-94	Biodegradation by selected bacterial strains in open microcosms and field plots in Russia are not relevant to the data requirement and not representative for European conditions
1121	Fate and behaviour in the environment	Farenhorst A. et al.	2015	Bulk deposition of pesticides in a Canadian city: Part 1. Glyphosate and other agricultural pesticides.	Water, Air, and Soil Pollution (2015), Vol. 226, No. 3, 47 p	Analysis of urban dust deposition samples from agricultural areas in Winnipeg, Canada are not representative for European agricultural practice
1122	Fate and behaviour in the environment	Faria R. R. et al.	2019	Parameters for glyphosate in OPLS-AA force field	Molecular Simulation (2019), 45(1), 80-85	Mechanism of action study not relevant to EU risk assessment. Use of molecular dynamics (MD) simulations to provide an atomistic detail in the description of such a system. Herein, partial atomic charges and dihedral angles were obtained quantum mechanism for glyphosate molecule. Parameters for MD simulation were implemented in the OPLS-AA force field to

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
						better understand the herbicide mechanism action. Results showed that atomic charges were consistent with the database of the force field. Additionally., potential energy curves for the dihedrals were consistent and could be used to run MD simulations. Therefore, the parameterisation reported for this molecule can be useful to explain studies involving its interaction with many enzymes and proteins such as 5-enolpyruvylshikimate 3-phosphate synthase enzyme (EPSP). Furthermore, considering these new data in OPLS-AA, numerous simulations can be proposed to unveil the effects of the glyphosate as an environment contaminant.
1123	Fate and behaviour in the environment	Ferrario C. et al.	2017	Legacy and emerging contaminants in meltwater of three Alpine glaciers	Science of the Total Environment (2017), Vol. 574, pp. 350-357	The paper is about contaminants in meltwater of Alpine glaciers, no glyphosate or AMPA were measured.
1124	Fate and behaviour in the environment	Gasperi J. et al.	2010	Occurrence and removal of priority pollutants by lamella clarification and biofiltration	Water Research (2010), Vol. 44, No. 10, pp. 3065-3076	Experiments on wastewater treatment are not relevant to EU data requirements.
1125	Fate and behaviour in the environment	Giaccio G. C. M. et al.	2019	Glyphosate and nutrient retention in preferential flow pathways	Ecologia Austral (2019), Vol. 29, No. 3, pp. 329-338	Study of vegetative strips in Argentina, not relevant to EU.

1270	Toxicology and metabolism	Avdatek F. et al.	2018	Protective effect of N-acetylcysteine on testicular oxidative damage, spermatological parameters and DNA damage in glyphosate-based herbicide-exposed rats.	Kocatepe Veterinary Journal (2018), Vol. 11, No. 3, pp. 292-300	Formulation tested (Knockdown 48 SL, Turkey) which is not comparable to the EU renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1271	Toxicology and metabolism	Avila-Vazquez M. et al.	2018	Environmental exposure to glyphosate and reproductive health impacts in agricultural population of Argentina.	Journal of Environmental Protection (2018), Vol. 9, No. 3, pp. 241-253	This publication is considered not relevant for the risk assessment of glyphosate because the general population followed was exposed to multiple environmental factors making it impossible to establish a causal relationship between exposure to glyphosate and reproductive disorders.
1272	Toxicology and metabolism	Ayanda O. I. et al.	2012	Histopathological examination of the liver and gills of <i>Clarias gariepinus</i> treated with glyphosate.	Environmental Research Journal (2012), Vol. 6, No. 3, pp. 228-234	Formulation tested in aquatic species (Roundup 480 mg/L isopropanol salt; 360 g/L a.e.). Effects clearly attributable to surfactant.
1273	Toxicology and metabolism	Babic Z. et al.	2019	Report of the Poison Control Centre for the period from 1 January to 31 December 2018; Original title: Izvjesce Centra za kontrolu otrovanja za razdoblje od 1. siječnja do 31. prosinca 2018	Arhiv Za Higijenu Rada i Toksikologiju (2019), Vol. 70, No. 1, pp. 69-73	Glyphosate based herbicide mentioned once and no glyphosate specific data included in the study.
1274	Toxicology and metabolism	Bader M. A. et al.	2015	Effect of quercetin against Roundup and/or fluoride induced biochemical alterations and lipid peroxidation in rats	International Journal of Pharmaceutical Sciences Review and Research (2015), Vol. 34, No. 2, pp. 168-175	Excessively high 28-day repeat dose at 500 mg/kg/day glyphosate based herbicide and is therefore not comparable to the EU glyphosate renewal.
1275	Toxicology and metabolism	Bali Y. A. et al.	2019	Learning and memory impairments associated to acetylcholinesterase inhibition and oxidative stress following glyphosate based-herbicide exposure in mice.	Toxicology (2019), Vol. 415, pp. 18-25	Formulation tested (Roundup herbicide (glyphosate concentration 360 g/l IPA salt, Monsanto) which contains a surfactant not present in the representative glyphosate used in the EU renewal process.
1276	Toxicology and metabolism	Bates N. et al.	2013	Glyphosate toxicity in animals.	Clinical Toxicology (2013), Vol. 51, No. 10, pp. 1243	Correspondence adds no new data on human health end-points.
1277	Toxicology and metabolism	Beecham J. E. et al.	2015	The possible link between autism and glyphosate acting as glycine mimetic - a review of evidence from the literature with analysis	Journal of Molecular and Genetic Medicine (2015), Vol. 9, No. 4, pp. 1000197/1-1000197/16	This publication is considered not relevant for glyphosate risk assessment because it is not based on experimental work and no epidemiologic methodology was followed.
1278	Toxicology and metabolism	Bellantuono V. et al.	2014	Pesticides alter ion transport across frog (<i>Pelophylax kl. esculentus</i>) skin	Chemistry in ecology (2014), Vol. 30, No. 7, pp. 602-610	End-point not relevant to human health risk assessment in the EU renewal.
1279	Toxicology and metabolism	Benitez Leite S. et al.	2019	DNA damage induced by exposure to pesticides in children of rural areas in Paraguay	Indian journal of medical research (2019), Vol. 150, No. 3, pp. 290-296	No evaluation of the glyphosate used as part of the study. Study provides a comparison of children living near transgenic soybean fields to a control group near crops managed with biological controls.
1280	Toxicology and metabolism	Beranger R. et al.	2018	Multiple pesticide analysis in hair samples of pregnant French women: Results from the ELFE national birth cohort.	Environment International (2018), Vol. 120, pp. 43-53	No data presented on glyphosate, therefore not relevant for the EU renewal.
1281	Toxicology and metabolism	Bernieri T. et al.	2019	Occupational exposure to pesticides and thyroid function in Brazilian soybean farmers.	Chemosphere (2019), Vol. 218, pp. 425-429	General pesticide exposures, not glyphosate specific, therefore not relevant for the EU renewal.
1282	Toxicology and metabolism	Bernieri T. et al.	2019	Effect of pesticide exposure on total antioxidant capacity and biochemical parameters in Brazilian soybean farmers	Drug and Chemical Toxicology (2019), Ahead of Print	General pesticide exposure biomonitoring study, not glyphosate specific and therefore not relevant for the EU renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1283	Toxicology and metabolism	Bhardwaj J. K. et al.	2019	Effective attenuation of glyphosate-induced oxidative stress and granulosa cell apoptosis by vitamins C and E in caprines.	Molecular reproduction and development (2019), Vol. 86, No. 1, pp. 42-52	Glyphosate based herbicide tested with in vitro test system. As this formulation is not the representative formulation used in the EU renewal process, it is not relevant.
1284	Toxicology and metabolism	Buralli R. J. et al.	2018	Respiratory condition of family farmers exposed to pesticides in the state of Rio de Janeiro, Brazil.	International Journal of Environmental Research and Public Health (2018), Vol. 15, No. 6, pp. 1203	General pesticide exposures, not glyphosate specific, therefore not relevant for the EU renewal.
1285	Toxicology and metabolism	Burella P. M. et al.	2017	Evaluation of Stage-Dependent Genotoxic Effect of Roundup® (Glyphosate) on Caiman latirostris Embryos.	Archives of environmental contamination and toxicology (2017), Vol. 72, No. 1, pp. 50-57	Glyphosate based herbicide tested on reptiles. End-point and species not relevant to EU annex I renewal.
1286	Toxicology and metabolism	Camacho A. et al.	2017	The health consequences of aerial spraying illicit crops: The case of Colombia.	Journal of health economics (2017), Vol. 54, pp. 147-160	This publication is considered not relevant for the risk assessment of glyphosate because it is too general and no specific epidemiological method was followed to establish an association between the application of glyphosate and disease outcome.
1287	Toxicology and metabolism	Caramello C. S. et al.	2017	Evaluation of herbicide glyphosate effects in the fish Prochilodus lineatus using chromosome aberration test.	Revista Veterinaria (2017), Vol. 28, No. 1, pp. 65-68	Formulation tested (Roundup Full II), not representative for the renewal.
1288	Toxicology and metabolism	Cassault-Meyer E. et al.	2014	An acute exposure to glyphosate-based herbicide alters aromatase levels in testis and sperm nuclear quality.	Environmental toxicology and pharmacology (2014), Vol. 38, No. 1, pp. 131-40	This publication is considered not relevant for the risk assessment of glyphosate because a glyphosate formulation (Roundup Grand Travaux Plus) was tested instead of glyphosate.
1289	Toxicology and metabolism	Castelani P. et al.	2013	Novel adjuvants for high load glyphosate formulations	SOFW Journal (2013), Vol. 139, No. 6, pp. 30-34,36	Formulation chemistry paper and therefore not relevant to the EU renewal of glyphosate.
1290	Toxicology and metabolism	Cattani D. et al.	2017	Developmental exposure to glyphosate-based herbicide and depressive-like behavior in adult offspring: Implication of glutamate excitotoxicity and oxidative stress.	Toxicology (2017), Vol. 387, pp. 67-80	Formulation tested (Roundup Original, Brazil, 360 g/L glyphosate), not-representative for the renewal.
1291	Toxicology and metabolism	Cattani D. et al.	2014	Mechanisms underlying the neurotoxicity induced by glyphosate-based herbicide in immature rat hippocampus: involvement of glutamate excitotoxicity.	Toxicology (2014), Vol. 320, pp. 34-45	Formulation tested (Roundup Original, Brazil, 360 g/L glyphosate), not-representative for the renewal.
1292	Toxicology and metabolism	Cattelan M. D. P. et al.	2018	Occupational exposure to pesticides in family agriculture and the oxidative, biochemical and hematological profile in this agricultural model	Life Sciences (2018), Vol. 203, pp. 177-183	General pesticide exposures, not glyphosate specific and thus not relevant to the EU renewal of glyphosate.
1293	Toxicology and metabolism	Cavusoglu K. et al.	2011	Protective effect of Ginkgo biloba L. leaf extract against glyphosate toxicity in Swiss albino mice.	Journal of medicinal food (2011), Vol. 14, No. 10, pp. 1263-72	Single dose administration intraperitoneally as well as the protective effect of a Ginkgo biloba extract. This is not representative of glyphosate exposure and therefore not relevant to the renewal.
1294	Toxicology and metabolism	Cermak A. M. M. et al.	2018	Redox imbalance caused by pesticides: a review of OPENTOX-related research.	Arhiv za higijenu rada i toksikologiju (2018), Vol. 69, No. 2, pp. 126-134	A review article of in vitro studies with no new data provided.

1295	Toxicology and metabolism	Chaufan G. et al.	2014	Glyphosate commercial formulation causes cytotoxicity, oxidative effects, and apoptosis on human cells: differences with its active ingredient.	International journal of toxicology (2014), Vol. 33, No. 1, pp. 29-38	No effects for glyphosate and AMPA, only with formulation tested in an in vitro system. Data not biologically relevant to the renewal.
1296	Toxicology and metabolism	Chlopecka M. et al.	2014	Glyphosate affects the spontaneous motoric activity of intestine at very low doses - in vitro study.	Pesticide biochemistry and physiology (2014), Vol. 113, pp. 25-30	A novel ex-vivo model not relevant to the EU renewal of glyphosate.
1297	Toxicology and metabolism	Chlopecka M. et al.	2017	The effect of glyphosate-based herbicide Roundup and its co-formulant, POEA, on the motoric activity of rat intestine - In vitro study.	Environmental toxicology and pharmacology (2017), Vol. 49, pp. 156-162	Formulation and mixtures of glyphosate and surfactant tested in vitro (Roundup ULTRA 170 SL; 170 g isopropylamine salt/L). Data not biologically relevant to the renewal.
1298	Toxicology and metabolism	Clair E. et al.	2012	A glyphosate-based herbicide induces necrosis and apoptosis in mature rat testicular cells in vitro, and testosterone decrease at lower levels.	Toxicology in vitro (2012), Vol. 26, No. 2, pp. 269-79	This publication is considered not relevant for the risk assessment of glyphosate as a glyphosate formulation (Roundup Bioforce) was used instead of glyphosate for in vitro testing.
1299	Toxicology and metabolism	Clark P. A. et al.	2016	Chronic kidney disease in Nicaraguan sugarcane workers: A historical, medical, environmental analysis and ethical analysis.	Internet Journal of Third World Medicine (2016), Vol. 12, No. 1	This publication is considered not relevant for glyphosate risk assessment because no systematic epidemiological approach was followed. Similarly figures for workers were not reported, nor were exposure patterns observed.
1300	Toxicology and metabolism	Clausing P.	2017	Cancer risk by glyphosate: The "Weight of Evidence Approach" of BfR. Krebsgefahr durch Glyphosat: Der "Weight of Evidence Approach" des BfR.	Umweltmedizin Hygiene Arbeitsmedizin (2017), Vol. 22, No. 1, pp. 27-34	This publication is considered not relevant for the risk assessment of glyphosate because it is not based on experimental work.
1301	Toxicology and metabolism	Clausing P. et al.	2018	Pesticides and public health: an analysis of the regulatory approach to assessing the carcinogenicity of glyphosate in the European Union.	Journal of epidemiology and community health (2018), Vol. 72, No. 8, pp. 668-672	No new data, a commentary article therefore not relevant for the renewal of glyphosate.
1302	Toxicology and metabolism	Coalova I. et al.	2014	Influence of the spray adjuvant on the toxicity effects of a glyphosate formulation.	Toxicology in vitro (2014), Vol. 28, No. 7, pp. 1306-11	The formulation tested in vitro (Atanor, Argentina; 48% glyphosate isopropylamine salt) is not thererepresentative formulation for the renewal.
1303	Toxicology and metabolism	Coon E. A. et al.	2019	Conjugal multiple system atrophy: Chance, shared risk factors, or evidence of transmissibility?.	Parkinsonism and Related Disorders (2019), Vol. 67, pp. 10-13	Glyphosate use is one of many potential environmental factors considered as a cause for multiple system atrophy, with no specific information provided.
1304	Toxicology and metabolism	Cortinovis C. et al.	2015	Glyphosate-surfactant herbicide poisoning in domestic animals: an epidemiological survey.	The Veterinary record (2015), Vol. 176, No. 16, pp. 413	Acute poisoning in animals, not relevant fort he renewal.
1305	Toxicology and metabolism	Coullery R. P. et al.	2016	Neuronal development and axon growth are altered by glyphosate through a WNT non-canonical signaling pathway.	Neurotoxicology (2016), Vol. 52, pp. 150-61	High in vitro doses >10 mM of glyphosate, therefore not representative of use/exposure and not relevant for the renewal.
1306	Toxicology and metabolism	Dar M. A.. et al.	2015	Single and interactive toxic potential of Roundup and ammonium nitrate on Haemato-biochemical parameters in wistar rats	Journal of Cell and Tissue Research (2015), Vol. 15, No. 3, pp. 5295-5299	High dose of Glyphosate based herbicide administered to rats in drinking water. As this is not the representative formulation, the article is not relevant to the renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1307	Toxicology and metabolism	Dar M. A. et al.	2018	Sub-acute oral toxicity of Roundup® and ammonium nitrate with special reference to oxidative stress indices in wistar rats.	Indian Journal of Animal Research (2018), Vol. 52, No. 3, pp. 405-408	Formulation tested Roundup® (Glyphosate 41 % EC, SD Fine Chemicals Mumbai, India); this is not representative for the EU renewal.
1308	Toxicology and metabolism	Dar M. A. et al.	2019	Effect of Repeated Oral Administration of Roundup((R)) and Ammonium Nitrate on Liver of Wistar Rats.	Proceedings of the Indian National Science Academy Part B Biological Sciences (2019), Vol. 89, No. 2, pp. 505-510	Formulation tested (Roundup, 41% EC) which is not the representative formulation used in the renewal.
1309	Toxicology and metabolism	Dardiotis E. et al.	2019	Pesticide exposure and cognitive function: Results from the Hellenic Longitudinal Investigation of Aging and Diet (HELIAD)	Environmental Research (2019), Vol. 177, pp. 108632	This publication is considered not relevant for the risk assessment of glyphosate because exposure to glyphosate is not documented.
1310	Toxicology and metabolism	de Adad L. M. M. et al.	2015	Occupational exposure of workers to pesticides: Toxicogenetics and susceptibility gene polymorphisms.	Genetics and Molecular Biology (2015), Vol. 38, No. 3, pp. 308-315	Not specific to glyphosate and therefore not relevant to the renewal.
1311	Toxicology and metabolism	de Aguiar L. M. et al.	2016	Glyphosate-based herbicide exposure causes antioxidant defence responses in the fruit fly <i>Drosophila melanogaster</i> .	Comparative biochemistry and physiology. Toxicology & pharmacology (2016), Vol. 185-186, pp. 94-101	Tested formulation (Roundup Original) for cellular mechanisms in houseflies, not directly relevant to human health risk assessment in the EU renewal of glyphosate.
1312	Toxicology and metabolism	de Castilhos Ghisi N. et al.	2013	Genotoxic effects of the herbicide Roundup(®) in the fish <i>Corydoras paleatus</i> (Jenyns 1842) after short-term, environmentally low concentration exposure	Environmental monitoring and assessment (2013), Vol. 185, No. 4, pp. 3201-7	Glyphosate based herbicide tested in aquatic species. As this is not the representative formulation, the article is not relevant to the renewal.
1313	Toxicology and metabolism	de Melo M. I. A. et al.	2018	Glyphosate-based herbicide induces toxic effects on human adipose-derived mesenchymal stem cells grown in human plasma.	Comparative Clinical Pathology (2018), Vol. 27, No. 4, pp. 989-1000	Glyphosate based herbicide tested in an in vitro system.
1314	Toxicology and metabolism	de Liz Oliveira Cavalli V. L. et al.	2013	Roundup disrupts male reproductive functions by triggering calcium-mediated cell death in rat testis and Sertoli cells.	Free radical biology & medicine (2013), Vol. 65, pp. 335-46	Formulation tested in vitro was Roundup Original, 360 g/L, a.e., Brazil. As this is not the representative formulation, the article is not relevant to the renewal.
1315	Toxicology and metabolism	de Moura F. R. et al.	2017	Effects of glyphosate-based herbicide on pintado da Amazonia: Hematology, histological aspects, metabolic parameters and genotoxic potential.	Environmental toxicology and pharmacology (2017), Vol. 56, pp. 241-248	The effects of high doses of Glyphosate based herbicide to aquatic species was assessed. As this is not the representative formulation, the article is not relevant to the renewal.
1316	Toxicology and metabolism	de Oliveira A. F. B. et al.	2019	Investigation of pesticide exposure by genotoxicological, biochemical, genetic polymorphic and in silico analysis	Ecotoxicology and Environmental Safety (2019), 179, 135-142	This publication is considered not relevant for the risk assessment of glyphosate because it is not specific to glyphosate. Focuses on mixtures of pesticides. It is not possible to establish a causal relationship between the biological endpoints assessed and exposure to glyphosate.
1317	Toxicology and metabolism	de Oliveira Joaquim A. et al.	2014	Effects of exposure to glyphosate in male and female mice behavior in pubertal period.	Brazilian Journal of Veterinary Research and Animal Science (2014), Vol. 51, No. 3, pp. 194-203	This publication is considered not relevant for the risk assessment of glyphosate because a formulation (Roundup Transorb) was used instead of glyphosate.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1318	Toxicology and metabolism	de Oliveira Joaquim A. et al.	2012	Behavioral effects of acute glyphosate exposure in male and female Balb/c mice.	Brazilian Journal of Veterinary Research and Animal Science (2012), Vol. 49, No. 5, pp. 367-376	Formulation tested in vivo was Roundup Transorb, 648 g/L of isopropylamine salt, 480 g/L a.e., Brazil. As this is not the representative formulation, the article is not relevant to the renewal.
1319	Toxicology and metabolism	de Ribeiro Sena T. R. et al.	2019	[High frequency hearing among rural workers exposed to pesticides] Audicao em altas frequencias em trabalhadores rurais expostos a agrototoxicos	Ciencia & saude coletiva (2019), Vol. 24, No. 10, pp. 3923-3932	No glyphosate specific data, confounded due to multiple pesticide uses therefore cannot be used in the renewal.
1320	Toxicology and metabolism	de Souza J. S. et al.	2019	Maternal glyphosate-based herbicide exposure alters antioxidant-related genes in the brain and serum metabolites of male rat offspring.	Neurotoxicology (2019), Vol. 74, pp. 121-131	Formulated product tested was Glyphosate Roundup Transorb; Monsanto of Brazil Ltda, São Paulo, Brazil. As this is not the representative formulation, the article is not relevant to the renewal.
1321	Toxicology and metabolism	de Souza J. S. et al.	2017	Perinatal exposure to glyphosate-based herbicide alters the thyrotrophic axis and causes thyroid hormone homeostasis imbalance in male rats.	Toxicology (2017), Vol. 377, pp. 25-37	This publication is considered not relevant for the risk assessment of glyphosate because a glyphosate formulation (Roundup Transorb) was used instead of glyphosate.
1322	Toxicology and metabolism	Defarge N. et al.	2018	Toxicity of formulants and heavy metals in glyphosate-based herbicides and other pesticides.	Toxicology reports (2018), Vol. 5, pp. 156-163	This paper is deemed not relevant as a non-representative formulation was tested as opposed to glyphosate.
1323	Toxicology and metabolism	Deshmukh U. S. et al.	2013	Effect of acute exposure of glyphosate herbicide, on wistar rats with reference to haematology and biochemical analysis	Bioscan (2013), Vol. 8, No. 2, pp. 381-383	Formulation tested in vivo at excessively high dose of 4000 mg/kg/day for 7 days and is therefore not applicable to the EU renewal.
1324	Toxicology and metabolism	Dhananjayan V. et al.	2019	Assessment of genotoxicity and cholinesterase activity among women workers occupationally exposed to pesticides in tea garden	Mutation Research, Genetic Toxicology and Environmental Mutagenesis (2019), Vol. 841, pp. 1-7	General pesticide exposure evaluation, not glyphosate specific therefore not applicable to the EU renewal.
1325	Toxicology and metabolism	Dhanarajam Y. et al.	2013	Haemato-biochemical studies on glyphosate induced toxicity in rats.	Journal of Interacademia (2013), Vol. 17, No. 3, pp. 512-517	Formulation tested in vivo, via oral gavage at high doses of 400 and 800 mg/kg/day for 28 days (Roundup, 41% isopropylamine salt). As this is not the representative formulation, the article is not relevant to the renewal.
1326	Toxicology and metabolism	Diaz-Criollo S. et al.	2019	Chronic pesticide mixture exposure including paraquat and respiratory outcomes among Colombian farmers.	Industrial health (2019), Vol. 58, No. 1, pp. 15-21	Mixtures paper, focused on paraquat mixtures therefore not relevant to the EU renewal.
1327	Toxicology and metabolism	Schrenk D.	2018	What is the meaning of 'A compound is carcinogenic'?	Toxicology reports (2018), Vol. 5, pp. 504-511	This publication is considered not relevant for the risk assessment of glyphosate as it concerns the classification of carcinogens in general and not glyphosate in particular.
1328	Toxicology and metabolism	Diken M. E. et al.	2017	In vitro effects of some pesticides on glutathione-S transferase activity.	Fresenius Environmental Bulletin (2017), Vol. 26, No. 12A, pp. 8023-8029	Formulations tested at excessively high in vitro doses in the mM range and is therefore not applicable to the EU renewal.
1329	Toxicology and metabolism	Dimpfel W. et al.	2018	Effect of Zembrin® and four of its alkaloid constituents on electric excitability of the rat hippocampus.	Journal of Ethnopharmacology (2018), Vol. 223, pp. 135-141	AMPA described in the paper is not aminomethylphosphonic acid, rather α-amino-3-hydroxy-5-methyl-4-isoxazole-propionic acid, therefore not relevant to the renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1330	Toxicology and metabolism	Djaldetti R. et al.	2019	The role of exposure to pesticides in the etiology of Parkinson's disease: a 18F-DOPA positron emission tomography study.	Journal of Neural Transmission (2019), Vol. 126, No. 2, pp. 159-166	A general pesticides paper which does not present any new glyphosate specific data. Therefore not relevant to the renewal.
1331	Toxicology and metabolism	dos Santos K. C. et al.	2014	Genotoxic and biochemical effects of atrazine and Roundup®, alone and in combination, on the Asian clam <i>Corbicula fluminea</i> .	Ecotoxicology and environmental safety (2014), Vol. 100, pp. 7-14	A glyphosate based herbicide was tested on an aquatic invertebrate. As this is not the representative formulation, the article is not relevant to the renewal.
1332	Toxicology and metabolism	Douwes J. et al.	2018	Carcinogenicity of glyphosate: why is New Zealand's EPA lost in the weeds?.	The New Zealand medical journal (2018), Vol. 131, No. 1472, pp. 82-89	Opinion article with no new data relevant to the renewal of glyphosate.
1333	Toxicology and metabolism	Dumukhalska Y. B. et al.	2018	Protective effect of the cisteile-histidile-tyrosile-histidile- isoleucine against heavy metal and glyfosate induced on content of lipid peroxidation products and reactive oxygen species in different age rats	Medichna ta Klinichna Khimiya (2018), No. 2, pp. 77-83	Administered a glyphosate based herbicide to rats for 30 days at 25% of acute oral LD50, this is not a representative way of exposure.
1334	Toxicology and metabolism	Eapen A. et al.	2018	Science, safety, and sanity: hot topics in food toxicology.	Journal of Food Protection (2018), Vol. 81, pp. 24	This paper did not mention glyphosate and is therefore not relevant.
1335	Toxicology and metabolism	Elhalwagy M. E. A. et al.	2014	Hepatotoxicity induced by glyphosate-based herbicide baron in albino rats.	Journal of Animal and Veterinary Advances (2014), Vol. 13, No. 5, pp. 322-329	Formulation tested in vivo (Baron, 48% glyphosate, Egypt). As this is not the representative formulation, the article is not relevant to the renewal.
1336	Toxicology and metabolism	Elie-Caille C. et al.	2010	Morphological damages of a glyphosate-treated human keratinocyte cell line revealed by a micro- to nanoscale microscopic investigation.	Cell biology and toxicology (2010), Vol. 26, No. 4, pp. 331-9	This publication is considered not relevant for the risk assessment of glyphosate as the test concentrations used were in the range of 10-70 mM (all >> 1mM) and therefore considered physiologically irrelevant.
1337	Toxicology and metabolism	Emmanuel A. G. et al.	2015	Protective potential of betulinic acid against glyphosate-induced toxicity in testis and epididymis of male wistar rats	International Journal of Current Research (2015), Vol. 7, No. 6, pp. 16650-16660	Formulation tested in vivo (decribed as "commercial glyphosate"). As this is not the representative formulation, the article is not relevant to the renewal.
1338	Toxicology and metabolism	Erhunmwunse N. O. et al.	2014	Histopathological changes in the brain tissue of Africa catfish exposure to glyphosate herbicide.	Journal of Applied Sciences and Environmental Management (2014), Vol. 18, No. 2, pp. 275-280	Formulation tested (commercial formulation of glyphosate (360 g/l-41 w.wt IPA). As this is not the representative formulation, the article is not relevant to the renewal.
1339	Toxicology and metabolism	Fagan J. et al.	2015	The Seralini affair: degeneration of Science to Re-Science?	Environmental Sciences Europe (2015), Vol. 27, No. 19	Commentary from the Seralini paper retraction therefore not relevant to the renewal.
1340	Toxicology and metabolism	Faria M. A.	2015	Glyphosate, neurological diseases - and the scientific method	Surgical neurology international (2015), Vol. 6, pp. 132	A letter providing comments on Samsel and Seneff (ref 2324). Therefore not relevant for the risk assessment of glyphosate.
1341	Toxicology and metabolism	Feng P. et al.	2019	A review on gut remediation of selected environmental contaminants: Possible roles of probiotics and gut microbiota.	Nutrients (2019), Vol. 11, No. 1, pp. 22	A literature review on pollutants, probiotics and gut microbes therefore not relevant for the risk assessment of glyphosate.
1342	Toxicology and metabolism	Flandroy L. et al.	2018	The impact of human activities and lifestyles on the interlinked microbiota and health of humans and of ecosystems.	Science of the Total Environment (2018), Vol. 627, pp. 1018-1038	General discussion of microbiota and proposal for research prioritization therefore not relevant for the risk assessment of glyphosate.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1343	Toxicology and metabolism	Fluegge K. et al.	2017	Exploring the potential confounder of nitrogen fertilizers in the relationship between pesticide exposures and risk of leukemia: a Poisson regression with two-way fixed-effects analysis	Chinese Journal of Cancer (2017), Vol. 36, No. 1, pp. 58	Letter to editor, focuses on nitrogen fertilizers and is therefore not relevant for the risk assessment of glyphosate.
1344	Toxicology and metabolism	Fluegge K. et al.	2017	Exposure to ambient PM10 and nitrogen dioxide and ADHD risk: A reply to Min & Min (2017).	Environment International (2017), Vol. 103, pp. 109-110	No new data, therefore not relevant for the risk assessment of glyphosate.
1345	Toxicology and metabolism	Fluegge K. R. et al.	2015	Glyphosate Use Predicts ADHD Hospital Discharges in the Healthcare Cost and Utilization Project Net (HCUPnet): A Two-Way Fixed-Effects Analysis.	PloS one (2015), Vol. 10, No. 8, pp. e0133525	Retracted publication, therefore not relevant for the risk assessment of glyphosate.
1346	Toxicology and metabolism	Ford B. et al.	2017	Mapping Proteome-wide Targets of Glyphosate in Mice.	Cell chemical biology (2017), Vol. 24, No. 2, pp. 133-140	This publication is considered not relevant because intraperitoneal injection was used which is an inappropriate route of administration for the occupational and food risk assessment of glyphosate.
1347	Toxicology and metabolism	Freddo N. et al.	2019	Isoflavone quantitation in soymilk: Genistein content and its biological effect.	CyTA-Journal of Food (2019), Vol. 17, No. 1, pp. 20-24	It mainly concerns the development of a bioanalytical method for the analysis of genistein and glyphosate in soya milk. The biological end-point selected (anxiety) and the test system used (elevated plus maze test) are not acceptable for regulatory use.
1348	Toxicology and metabolism	Frescura V. D. et al.	2013	Post-treatment with plant extracts used in Brazilian folk medicine caused a partial reversal of the antiproliferative effect of glyphosate in the <i>Allium cepa</i> test	Biocell (2013), Vol. 37, No. 2, pp. 23-8	Glyphosate used as an un-validated positive control in assay and is therefore not relevant for the risk assessment of glyphosate.
1349	Toxicology and metabolism	Fu H. et al.	2019	Toxicity of glyphosate in feed for weanling piglets and the mechanism of glyphosate detoxification by the liver nuclear receptor CAR/PXR pathway.	Journal of hazardous materials (2019), Vol. 387, pp. 121707	Glyphosate based herbicide dosed to weanling piglets. As this is not the representative formulation, the article is not relevant to the renewal.
1350	Toxicology and metabolism	Fuso A. et al.	2019	CpG and non-CpG methylation in the diet-epigenetics-neurodegeneration connection.	Current Nutrition Reports (2019), Vol. 8, No. 2, pp. 74-82	A review paper that mentions glyphosate once without any data. Therefore is not relevant for the risk assessment of glyphosate.
1351	Toxicology and metabolism	Gallegos C. E. et al.	2016	Exposure to a glyphosate-based herbicide during pregnancy and lactation induces neurobehavioral alterations in rat offspring.	Neurotoxicology (2016), Vol. 53, pp. 20-28	Formulation tested in vivo via drinking water (Glifloglex, 48% glyphosate, Gleba S.R.L., Argentina). As this is not the representative formulation, the article is not relevant to the renewal.
1352	Toxicology and metabolism	Gallegos C. E. et al.	2018	Perinatal Glyphosate-Based Herbicide Exposure in Rats Alters Brain Antioxidant Status, Glutamate and Acetylcholine Metabolism and Affects Recognition Memory.	Neurotoxicity research (2018), Vol. 34, No. 3, pp. 363-374	Formulation tested (in Argentina, Glifloglex® from Gleba S.R.L., 48 g isopropylamine salt per 100 cm ³ ; 35.6% w/v a.e.). As this is not the representative formulation, the article is not relevant to the renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1353	Toxicology and metabolism	Gasnier C. et al.	2011	Defined plant extracts can protect human cells against combined xenobiotic effects.	Journal of occupational medicine and toxicology (2011), Vol. 6, No. 1, pp. 3	Protective mechanism of plant extracts upon various chemical exposure (RoundUp residues, Bisphenol A, Atrazine). As this is not the representative formulation, the article is not relevant to the renewal.
1354	Toxicology and metabolism	Gasnier C. et al.	2010	Dig1 protects against cell death provoked by glyphosate-based herbicides in human liver cell lines	Journal of Occupational Medicine and Toxicology (2010), Vol. 5, pp. 29-29	Protective mechanism of plant extracts upon various chemical exposure (RoundUp residues, Bisphenol A, Atrazine). As this is not the representative formulation, the article is not relevant to the renewal.
1355	Toxicology and metabolism	Gencer N. et al.	2011	In vitro effects of some pesticides on PON1Q192 and PON1R192 isoenzymes from human serum.	Fresenius Environmental Bulletin (2011), Vol. 20, No. 3, pp. 590-596	Test material identity is entirely missing and the claim presented is dubious: "The pesticides were of commercial origin, and at the highest available purity level (99%)." Therefore it is not relevant to the renewal of glyphosate.
1356	Toxicology and metabolism	Gentile N. et al.	2012	Micronucleus assay as a biomarker of genotoxicity in the occupational exposure to agrochemicals in rural workers	Bulletin of Environmental Contamination and Toxicology (2012), Vol. 88, No. 6, pp. 816-822	This paper does not contain glyphosate specific data and is therefore not relevant to the renewal of glyphosate.
1357	Toxicology and metabolism	George J. et al.	2010	Studies on glyphosate-induced carcinogenicity in mouse skin: a proteomic approach.	Journal of proteomics (2010), Vol. 73, No. 5, pp. 951-64	The test material was a glyphosate-based formulation and not the reference formulation MON 52276. As this is not the representative formulation, the article is not relevant to the renewal.
1358	Toxicology and metabolism	George J. et al.	2013	Emptying of Intracellular Calcium Pool and Oxidative Stress Imbalance Are Associated with the Glyphosate-Induced Proliferation in Human Skin Keratinocytes HaCaT Cells.	ISRN dermatology (2013), Vol. 2013, pp. 825180	Formulation tested in vivo via dermal application (Roundup Original, 41% isopropylamine salt, 36% a.e.). Relevance of proteomic measurements not validated and as this is not the representative formulation, the article is not relevant to the renewal.
1359	Toxicology and metabolism	Gomez A. L. et al.	2019	Male mammary gland development and methylation status of estrogen receptor alpha in Wistar rats are modified by the developmental exposure to a glyphosate-based herbicide.	Molecular and cellular endocrinology (2019), Vol. 481, pp. 14-25	Formulation tested (Magnum Super II, Grupo Agros SA; 66.2% K salt, 54% a.e.). As this is not the representative formulation, the article is not relevant to the renewal.
1360	Toxicology and metabolism	Gomez-Arroyo S. et al.	2013	Assessing the genotoxic risk for Mexican children who are in residential proximity to agricultural areas with intense aerial pesticide applications	Revista Internacional de Contaminacion Ambiental (2013), Vol. 29, No. 3, pp. 217-225	This study does not present any glyphosate specific information and is therefore not relevant to the renewal.
1361	Toxicology and metabolism	Goussard P. et al.	2019	Corrosive injury of the trachea in children.	Clinical Case Reports (2019), Vol. 7, No. 10, pp. 1999-2003	One of the cases cited in the article swallowed an unknown amount of glyphosate formulation. No other mention of glyphosate. Focus of article on corrosion of trachea, not glyphosate and is therefore not relevant to the renewal
1362	Toxicology and metabolism	Gress S. et al.	2016	Dig1 protects against locomotor and biochemical dysfunctions provoked by Roundup.	BMC complementary and alternative medicine (2016), Vol. 16, pp. 234	Glyphosate based herbicide administered to rats in drinking water. As this is not the representative formulation, the article is not relevant to the renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1363	Toxicology and metabolism	Gress S. et al.	2015	Cardiotoxic Electrophysiological Effects of the Herbicide Roundup® in Rat and Rabbit Ventricular Myocardium In Vitro.	Cardiovascular toxicology (2015), Vol. 15, No. 4, pp. 324-35	Roundup Ultra formulation tested in vitro. As this is not the representative formulation, the article is not relevant to the renewal.
1364	Toxicology and metabolism	Guerrero Schimpf M. et al.	2018	Glyphosate-based herbicide enhances the uterine sensitivity to estradiol in rats.	The Journal of endocrinology (2018), Vol. 239, No. 2, pp 197-213	Non representative formulation tested instead of glyphosate. As this is not the representative formulation, the article is not relevant to the renewal.
1365	Toxicology and metabolism	Guerrero Schimpf M. et al.	2017	Neonatal exposure to a glyphosate based herbicide alters the development of the rat uterus.	Toxicology (2017), Vol. 376, pp. 2-14	Formulation tested in vivo via subcutaneous injection (Roundup FULL II, 66.2% potassium salt). As this is not the representative formulation, the article is not relevant to the renewal.
1366	Toxicology and metabolism	Guha N. et al.	2013	Characterization of residential pesticide use and chemical formulations through self-report and household inventory: The northern California childhood leukemia study.	Environmental Health Perspectives (2013), Vol. 121, No. 2, pp. 276-282	No data relevant to glyphosate human health effects and exposure to glyphosate therefore not relevant to the risk assessments.
1367	Toxicology and metabolism	Guilherme S. et al.	2012	DNA damage in fish (Anguilla anguilla) exposed to a glyphosate-based herbicide -- elucidation of organ-specificity and the role of oxidative stress.	Mutation research (2012), Vol. 743, No. 1-2, pp. 1-9	Glyphosate based herbicide tested in eels, surfactants present in the formulation are known to damage gills. As this is not the representative formulation, the article is not relevant to the renewal.
1368	Toxicology and metabolism	Guilherme S. et al.	2014	Are DNA-damaging effects induced by herbicide formulations (Roundup® and Garlon®) in fish transient and reversible upon cessation of exposure?.	Aquatic toxicology (2014), Vol. 155, pp. 213-21	Glyphosate based herbicide tested in aquatic species. As this is not the representative formulation, the article is not relevant to the renewal.
1369	Toxicology and metabolism	Gunatilake S. et al.	2019	Glyphosate's Synergistic Toxicity in Combination with Other Factors as a Cause of Chronic Kidney Disease of Unknown Origin.	International journal of environmental research and public health (2019), Vol. 16, No. 15	This publication is considered not relevant for the risk assessment of glyphosate because it does not present concrete epidemiological data on a possible association between chronic kidney disease and a synergistic effect of glyphosate with other environmental factors such as heavy metals.
1370	Toxicology and metabolism	Guyton K. Z. et al.	2015	Carcinogenicity of tetrachlorvinphos, parathion, malathion, diazinon, and glyphosate	Lancet Oncology (2015), Vol. 16, no. 5, pp. 490-491	This review is considered not relevant for the risk assessment of glyphosate because it does not contain a detailed report and discussion of experimental results. It only concerns a brief summary of the IARC evaluation of glyphosate which is not corroborated by regulatory agencies.
1371	Toxicology and metabolism	Halwachs S. et al.	2016	Assessment of ABCG2-mediated transport of pesticides across the rabbit placenta barrier using a novel MDCKII in vitro model.	Toxicology and applied pharmacology (2016), Vol. 305, pp. 66-74	No adverse effects, and therefore there is no relevance to the human health risk assessment.
1372	Toxicology and metabolism	Hamdaoui L. et al.	2016	Nephrotoxicity of Kalach 360 SL: biochemical and histopathological findings.	Toxicology mechanisms and methods (2016), Vol. 26, No. 9, pp. 685-691	Formulation tested (Kalach 360 SL) in vivo. As this is not the representative formulation, the article is not relevant to the renewal.
1373	Toxicology and metabolism	Hamdaoui L. et al.	2019	Sub-chronic exposure to Kalach 360 SL-induced damage in rats' liver and hematological system.	Environmental science and pollution research international (2019), Vol. 26, No. 36, pp. 36634-36646	Glyphosate based herbicide dosed to rats. As this is not the representative formulation, the article is not relevant to the renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1374	Toxicology and metabolism	Hamdaoui L. et al.	2018	Subchronic exposure to kalach 360 SL-induced endocrine disruption and ovary damage in female rats.	Archives of physiology and biochemistry (2018), Vol. 124, No. 1, pp. 27-34	Formulation tested (KL, Arysta Life Science, Fouchana Tunisia; isopropylamine salt 41.5%; surfactant, 15.5%). As this is not the representative formulation, the article is not relevant to the renewal.
1375	Toxicology and metabolism	Han J. et al.	2016	Determination of glyphosate and its metabolite in emergency room in Korea.	Forensic science international (2016), Vol. 265, pp. 41-6	Analytical method development in human blood therefore not relevant to the glyphosate risk assessment.
1376	Toxicology and metabolism	Hao Y. et al.	2019	Roundup confers cytotoxicity through DNA damage and Mitochondria-Associated apoptosis induction	Environmental Pollution (2019), Vol. 252, No. Part_A, pp. 917-923	This publication is considered not relevant for the risk assessment of glyphosate because a glyphosate formulation was tested in vitro instead of glyphosate.
1377	Toxicology and metabolism	Hao Y. et al.	2019	Evaluation of the cytotoxic effects of glyphosate herbicides in human liver, lung, and nerve	Journal of Environmental Science and Health, Part B Pesticides, Food Contaminants, and Agricultural Wastes (2019), Vol. 54, No. 9, pp. 737-744	This publication is considered not relevant for the risk assessment of glyphosate because glyphosate concentrations were tested in vitro that are physiologically not feasible in in vivo experimental models (> 1 mM).
1378	Toxicology and metabolism	Haskovic E. et al.	2016	Effects of Glyphosate on Enzyme Activity and Serum Glucose in Rats <i>Rattus norvegicus</i>	Acta veterinaria (2016), Vol. 66, No. 2, pp. 214-221	Only liver enzymes measured after 15 days dermal application of formulated product (Total 480 SL, Croatia), which is not a representative formulation for the renewal.
1379	Toxicology and metabolism	Hendges C. et al.	2019	Human intoxication by agrochemicals in the region of South Brazil between 1999 and 2014.	Journal of Environmental Science and Health Part B Pesticides Food Contaminants and Agricultural Wastes (2019), Vol. 54, No. 4, pp. 219-225	This publication is considered not relevant for the risk assessment of glyphosate because it does not address specifically glyphosate exposure but pesticide poisoning in general.
1380	Toxicology and metabolism	Heritier L. et al.	2017	Oxidative stress induced by glyphosate-based herbicide on freshwater turtles.	Environmental toxicology and chemistry (2017), Vol. 36, No. 12, pp. 3343-3350	Glyphosate based herbicide tested on turtles. As this is not the representative formulation, the article is not relevant to the renewal.
1381	Toxicology and metabolism	Hernandez-Plata I. et al.	2015	The herbicide glyphosate causes behavioral changes and alterations in dopaminergic markers in male Sprague-Dawley rat.	Neurotoxicology (2015), Vol. 46, pp. 79-91	This publication is considered not relevant because of the use of intraperitoneal injection which is an inappropriate route of exposure for the occupational and food risk assessment of glyphosate.
1382	Toxicology and metabolism	Herrera-Valdes R. et al.	2019	Epidemic of chronic kidney disease of nontraditional etiology in El Salvador: Integrated health sector action and south-south cooperation.	MEDICC Review (2019), Vol. 21, No. 3, pp. 46-52	No data specific to glyphosate. Evaluated handling of agrochemicals as a risk factor, rather than individual pesticides.
1383	Toxicology and metabolism	Heu C. et al.	2012	Glyphosate-induced stiffening of HaCaT keratinocytes, a Peak Force Tapping study on living cells.	Journal of structural biology (2012), Vol. 178, No. 1, pp. 1-7	This publication is considered not relevant for the risk assessment of glyphosate because glyphosate concentrations have been used in vitro that cannot be attained in in vivo experimental models (> 1 mM).
1384	Toxicology and metabolism	Heu C. et al.	2012	A step further toward glyphosate-induced epidermal cell death: involvement of mitochondrial and oxidative mechanisms.	Environmental toxicology and pharmacology (2012), Vol. 34, No. 2, pp. 144-153	This publication is considered not relevant for the risk assessment of glyphosate because the cytotoxicity of glyphosate to epidermal cells was tested in the mM range whereas contact of epidermal cells to glyphosate formulations is always combined with surfactants which produce cytotoxicity in the sub-mM range.
1385	Toxicology and metabolism	Hofmann J. N. et al.	2015	The Biomarkers of Exposure and Effect in Agriculture (BEEA) Study: Rationale, Design, Methods, and Participant Characteristics	Journal of toxicology and environmental health. Part A (2015), Vol. 78, No. 21-22, pp. 1338-47	No endpoints for glyphosate, only relative use rates therefore cannot be used in the risk assessments.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1386	Toxicology and metabolism	Hong S. et al.	2012	Cellular Toxicity of Surfactants Used as Herbicide Additives	JOURNAL OF KOREAN MEDICAL SCIENCE (2012), Vol. 27, No. 1, pp. 3-9	This study does not present any glyphosate specific information and cannot therefore be used in risk assessments.
1387	Toxicology and metabolism	Hong Y. et al.	2017	Effects of glyphosate on immune responses and haemocyte DNA damage of Chinese mitten crab, <i>Eriocheir sinensis</i> .	Fish & shellfish immunology (2017), Vol. 71, pp. 19-27	This paper discusses the effects of high doses of a glyphosate based herbicide on crabs. As this is not the representative formulation, the article is not relevant to the renewal.
1388	Toxicology and metabolism	Hsu C. et al.	2013	Can mortality from agricultural pesticide poisoning be predicted in the emergency department? Findings from a hospital-based study in eastern Taiwan	Tzu Chi Medical Journal (2013), Vol. 25, no. 1, pp. 32-38	This paper provides a retrospective analysis of poisoning incidents in Taiwan and is therefore not relevant to the renewal of glyphosate.
1389	Toxicology and metabolism	Hulin M. et al.	2014	Assessment of infant exposure to food chemicals: the French Total Diet Study design	Food Additives & Contaminants, Part A: Chemistry, Analysis, Control, Exposure & Risk Assessment (2014), Vol. 31, No. 7, pp. 1226-1239	This paper describes the assessment process of infant exposure to food chemicals. No glyphosate data was presented in the report, and is therefore not relevant to the renewal process.
1390	Toxicology and metabolism	Hussain R. et al.	2019	Exposure to Sub-Acute Concentrations of Glyphosate Induce Clinico-Hematological, Serum Biochemical and Genotoxic Damage in Adult Cockerels	PAKISTAN VETERINARY JOURNAL (2019), Vol. 39, No. 2, pp. 181-186	The glyphosate based herbicide used in the paper is not an EU representative formulation and is therefore not relevant to the renewal. Furthermore, the product was administered via gavage to avian species.
1391	Toxicology and metabolism	Hutter H. et al.	2018	Cytotoxic and Genotoxic Effects of Pesticide Exposure in Male Coffee Farmworkers of the Jarabacoa Region, Dominican Republic	INTERNATIONAL JOURNAL OF ENVIRONMENTAL RESEARCH AND PUBLIC HEALTH (2018), Vol. 15, No. 8	This study did not include any analyses specific for glyphosate, so it is not relevant.
1392	Toxicology and metabolism	IARC	2017	Some organophosphate insecticides and herbicides.	IARC Monographs on the Evaluation of Carcinogenic Risks to Humans (2017), Vol. 112, VII + pp. 452	This paper provides a secondary source of information and is therefore not relevant.
1393	Toxicology and metabolism	Ibrahim A. M. et al.	2019	Toxicological impact of butralin, glyphosate-isopropylammonium and pendimethalin herbicides on physiological parameters of <i>Biomphalaria alexandrina</i> snails	Molluscan research (2019), Vol. 39, No. 3, pp. 224-233	This paper describes an ecotoxicology study of snails exposed to a glyphosate based herbicide. As this is not the representative formulation, the article is not relevant to the renewal.
1394	Toxicology and metabolism	Ikpeme E. V. et al.	2012	Efficacy of ascorbic acid in reducing glyphosate-induced toxicity in rats.	British Biotechnology Journal (2012), Vol. 2, No. 3, pp. 157-168	The formulation tested in vivo is not described. It is not sure what was tested and therefore the effect cannot be attributed to glyphosate.
1395	Toxicology and metabolism	Ilyushina N. A. et al.	2019	Applicability of the Ames test and micronucleus test in vivo for the evaluation of the equivalence of pesticide technical grade active ingredients compared to original active substances	Gigiena i Sanitariya (2019), No. 2, pp. 219-224	Technical grade glyphosate was used as positive control in an assay within this paper. As this is not the representative formulation, the article is not relevant to the renewal.
1396	Toxicology and metabolism	Ingaramo P. I. et al.	2019	Acute uterine effects and long-term reproductive alterations in postnatally exposed female rats to a mixture of commercial formulations of endosulfan and glyphosate.	Food and chemical toxicology (2019), Vol. 134, pp. 110832	A glyphosate based herbicide was dosed to rats in this report. As this is not the representative formulation, the article is not relevant to the renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1397	Toxicology and metabolism	Ingaramo P. I. et al.	2017	Neonatal exposure to a glyphosate-based herbicide alters uterine decidualization in rats.	Reproductive toxicology (2017), Vol. 73, pp. 87-95	Formulation tested in vivo via sub-cutaneous injection (undisclosed brand, 66.2% potassium salt; 54% glyphosate acid). As this is not the representative formulation, the article is not relevant to the renewal.
1398	Toxicology and metabolism	Ingaramo P. I. et al.	2016	Effects of neonatal exposure to a glyphosate-based herbicide on female rat reproduction.	Reproduction (2016), Vol. 152, No. 5, pp. 403-15	A glyphosate based herbicide formulation was tested in vivo (66.2%, potassium salt). As this is not the representative formulation, the article is not relevant to the renewal.
1399	Toxicology and metabolism	Intranuovo G. et al.	2018	Assessment of DNA damages in lymphocytes of agricultural workers exposed to pesticides by comet assay in a cross-sectional study	Biomarkers (2018), Vol. 23, No. 5, pp. 462-473	General pesticide exposure evaluation, not glyphosate specific. Therefore this article is not relevant to the glyphosate renewal process.
1400	Toxicology and metabolism	Iummato M. M. et al.	2017	Effect of glyphosate acid on biochemical markers of periphyton exposed in outdoor mesocosms in the presence and absence of the mussel <i>Limnoperna fortunei</i> .	Environmental toxicology and chemistry (2017), Vol. 36, No. 7, pp. 1775-1784	The end-points described in this study are not relevant to human health risk assessments in the renewal.
1401	Toxicology and metabolism	Jayasumana C.	2019	Chronic Interstitial Nephritis in Agricultural Communities (CINAC) in Sri Lanka	SEMINARS IN NEPHROLOGY (2019), Vol. 39, No. 3, pp. 278-283	There is no evaluation of glyphosate exposure with any disease outcome presented in this paper. Therefore it is not relevant to the renewal.
1402	Toxicology and metabolism	Jayasumana C. et al.	2015	Drinking well water and occupational exposure to Herbicides is associated with chronic kidney disease, in Padavi-Sripura, Sri Lanka.	Environmental health (2015), Vol. 14, pp. 6	This study was performed in Sri Lanka and is therefore not relevant to the EU.
1403	Toxicology and metabolism	Jayasumana C. et al.	2015	Phosphate fertilizer is a main source of arsenic in areas affected with chronic kidney disease of unknown etiology in Sri Lanka.	SpringerPlus (2015), Vol. 4, pp. 90	No data on glyphosate is presented, and is therefore not relevant to the renewal dossier.
1404	Toxicology and metabolism	Ji H. et al.	2018	Differential microRNA expression in the prefrontal cortex of mouse offspring induced by glyphosate exposure during pregnancy and lactation.	Experimental and therapeutic medicine (2018), Vol. 15, No. 3, pp. 2457-2467	In this paper a glyphosate based formulation was tested, (purchased in China) and containing 48% IPA salt, and 35.6% a.e. Furthermore a glyphosate-based formulation (marketed in China) was used instead of glyphosate in an in vivo assay in mice with the end-points measured not suitable for risk assessment (differential microRNA expression in the prefrontal cortex).
1405	Toxicology and metabolism	Jiang X. et al.	2018	A commercial Roundup formulation induced male germ cell apoptosis by promoting the expression of XAF1 in adult mice	Toxicology Letters (2018), Vol. 296, pp. 163-172	In this study, a Roundup formulation was administered via gavage to adult male mice. As this is not the representative formulation, the article is not relevant to the renewal.
1406	Toxicology and metabolism	Kamata R. et al.	2018	Agonistic effects of diverse xenobiotics on the constitutive androstane receptor as detected in a recombinant yeast-cell assay	Toxicology In Vitro (2018), Vol. 46, pp. 335-349	This paper presents yeast cell assay validation. Glyphosate was not active in the test system and therefore this is not relevant for the renewal.
1407	Toxicology and metabolism	Kamel F. et al.	2012	Pesticide exposure and amyotrophic lateral sclerosis	NeuroToxicology (2012), Vol. 33, No. 3, pp. 457-462	This study does not present correlations of glyphosate use and effect and is not relevant to the renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1408	Toxicology and metabolism	Karthikraj R. et al.	2019	Widespread occurrence of glyphosate in urine from pet dogs and cats in New York State, USA.	The Science of the total environment (2019), Vol. 659, pp. 790-795	These data do not meet any data requirement under Regulation (EC) 1107/2009 and do not fit within any standard risk assessment under that regulation. The results indicate that exposure to glyphosate may be common in this limited population of companion animals, but at levels which do not raise toxicological concern.
1409	Toxicology and metabolism	Kawada T.	2018	Glyphosate toxicity and carcinogenicity.	EXCLI journal (2018), Vol. 17, pp. 800-801	Letter to editor citing other publications in this review, with no data discussed. Therefore not relevant to the renewal.
1410	Toxicology and metabolism	Khayat C. B. et al.	2013	Assessment of DNA damage in Brazilian workers occupationally exposed to pesticides: a study from Central Brazil.	Environmental Science and Pollution Research International (2013), Vol. 20, No. 10, pp. 7334-7340	No specific analyses was performed for glyphosate in this paper. Furthermore, uncertain sampling from an undefined population and adequate statistical analysis was carried out. No description of a case control study was provided, and the analysis did not evaluate a causal parameter for case control studies (e.g., an odds ratio) or address potential biases in the analysis. Therefore this study is not relevant to the renewal.
1411	Toxicology and metabolism	Kim S. et al.	2019	Pesticides as a risk factor for metabolic syndrome: Population-based longitudinal study in Korea	Molecular & Cellular Toxicology (2019), Vol. 15, No. 4, pp. 431-441	Epidemiology study on pesticide use in general. No information on specific pesticides used in the study was collected and is therefore not applicable to the renewal of glyphosate.
1412	Toxicology and metabolism	Kongtip P. et al.	2018	A cross-sectional investigation of cardiovascular and metabolic biomarkers among conventional and organic farmers in Thailand	International Journal of Environmental Research and Public Health (2018), Vol. 15, No. 11, pp. 2590	This paper presents an evaluation of the effects of pesticide use in general on metabolic biomarkers. The results are not correlated to glyphosate use and cannot be used in glyphosate risk assessments.
1413	Toxicology and metabolism	Koutros S. et al.	2013	Genetic susceptibility loci, pesticide exposure and prostate cancer risk	PLoS One (2013), Vol. 8, No. 4, pp. e58195	This paper does not mention glyphosate and is not relevant.
1414	Toxicology and metabolism	Kubsad D. et al.	2019	Assessment of Glyphosate Induced Epigenetic Transgenerational Inheritance of Pathologies and Sperm Epimutations: Generational Toxicology	Scientific Reports (2019), Vol. 9, No. 1, pp. 1-17	This publication is considered not relevant because the intraperitoneal route of administration is not appropriate for the risk assessment of glyphosate.
1415	Toxicology and metabolism	Kumar V. et al.	2018	Interactions of Acephate, Glyphosate, Monocrotophos and Phorate with Bovine Serum Albumin.	Indian Journal of Pharmaceutical Sciences (2018), Vol. 80, No. 6, pp. 1151-1154	Study of binding to bovine serum albumin by several pesticides. No significant effect of glyphosate in this test system and is therefore not relevant for the risk assessment.
1416	Toxicology and metabolism	Kurenbach B. et al.	2017	Herbicide ingredients change Salmonella enterica sv. Typhimurium and Escherichia coli antibiotic responses.	Microbiology (2017), Vol. 163, pp. 1791-1801	This study describes the addition of high doses of herbicide ingredients to an in vitro system. The reason for the exclusion of in vitro testing of formulations to assess health effects as a result of systemic exposure is the presence of surfactants which produce cell toxicity based on the destabilization of the cell membrane and the mitochondrial membrane thus masking the specific toxicity of glyphosate.
1417	Toxicology and metabolism	Kwiatkowska M. et al.	2014	The effect of metabolites and impurities of glyphosate on human erythrocytes (in vitro).	Pesticide biochemistry and physiology (2014), Vol. 109, pp. 34-43	This publication is considered not relevant for the risk assessment of glyphosate because the in vitro concentrations used are in the mM range and the impurities were tested at the same concentrations as glyphosate which will never occur in practice.
1418	Toxicology and metabolism	Kwiatkowska M. et al.	2016	The Impact of Glyphosate, Its Metabolites and Impurities on	PloS one (2016), Vol. 11, No. 6, pp. e0156946	This publication is considered not relevant for the risk assessment of glyphosate because the in vitro concentrations

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
				Viability, ATP Level and Morphological changes in Human Peripheral Blood Mononuclear Cells.		used are in the mM range and the impurities were tested at the same concentrations as glyphosate which will never occur in practice.
1419	Toxicology and metabolism	Lajmanovich R. C. et al.	2015	Harmful Effects of the Dermal Intake of Commercial Formulations Containing Chlorpyrifos, 2,4-D, and Glyphosate on the Common Toad <i>Rhinella arenarum</i> (Anura: Bufonidae).	Water Air and Soil Pollution (2015), Vol. 226, No. 12, pp. Article No.: 427	This study describes toad dermal exposure to a glyphosate based herbicide. Dermal uptake via moist toad skin was assessed and the end-points identified are not relevant to the human health risk assessment of glyphosate.
1420	Toxicology and metabolism	Landrigan P. J.	2018	Pesticides and Human Reproduction.	JAMA Internal Medicine (2018), Vol. 178, No. 1, pp. 26-27	No data provided in this paper as it is a commentary article. Cannot be used in a glyphosate risk assessment.
1421	Toxicology and metabolism	Larsen K. E. et al.	2016	The herbicide glyphosate is a weak inhibitor of acetylcholinesterase in rats.	Environmental toxicology and pharmacology (2016), Vol. 45, pp. 41-4	This publication is considered not relevant for the risk assessment of glyphosate because the concentrations used for in vitro testing were all in the mM range and not representative of in use conditions.
1422	Toxicology and metabolism	Larsson M. O. et al.	2018	Corrigendum to "Refined assessment and perspectives on the cumulative risk resulting from the dietary exposure to pesticide residues in the Danish population"[Food and Chemical Toxicology 111 (2018) 207-267] [Erratum to document cited in CA169:146371]	Food and Chemical Toxicology (2018), Vol. 113, pp. 345-346	Corrigendum to paper correcting calculations not pertaining to glyphosate. Therefore not relevant.
1423	Toxicology and metabolism	Lee H. M. et al.	2012	A case of activated charcoal aspiration treated by early and repeated bronchoalveolar lavage.	Tuberculosis and Respiratory Diseases (2012), Vol. 72, No. 2, pp. 177-181	Effects attributed to activated charcoal aspiration, not glyphosate. Therefore the paper is not relevant to the renewal.
1424	Toxicology and metabolism	Lee J-W. et al.	2015	Common Pesticides Used in Suicide Attempts Following the 2012 Paraquat Ban in Korea.	Journal of Korean medical science (2015), Vol. 30, No. 10, pp. 1517-21	Reports numbers of suicide attempts in South Korea, common pesticide use, not specifically referring to glyphosate.
1425	Toxicology and metabolism	Lermen J. et al.	2018	Pesticide exposure and health conditions among orange growers in Southern Brazil	Journal of Environmental Science and Health, Part B: Pesticides, Food Contaminants, and Agricultural Wastes (2018), Vol. 53, No. 4, pp. 215-221	This publication is not relevant for the risk assessment of glyphosate because the biological monitoring data were only used to address pesticide exposure in general and not glyphosate in particular.
1426	Toxicology and metabolism	Leveroni F. A. et al.	2017	Genotoxic response of blood, gill and liver cells of <i>Piaractus mesopotamicus</i> after an acute exposure to a glyphosate-based herbicide	Caryologia (2017), Vol. 70, No. 1, pp. 21-28	Formulation tested in aquatic species (Roundup Full II; 66.2% glyphosate potassium salt; CAS no. 70901-12-1). As this is not the representative formulation, the article is not relevant to the renewal.
1427	Toxicology and metabolism	Lewis M. M. et al.	2017	Lateralized basal ganglia vulnerability to pesticide exposure in asymptomatic agricultural workers	Toxicological Sciences (2017), Vol. 159, No. 1, pp. 170-178	The results presented are not correlated with exposure to glyphosate. Therefore this article is not relevant to the renewal of glyphosate.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1428	Toxicology and metabolism	Leyva-Soto L. A. et al.	2018	GLYPHOSATE AND AMINOMETHYLPHOSPHONIC ACID IN POPULATION OF AGRICULTURAL FIELDS: HEALTH RISK ASSESSMENT OVERVIEW.	Applied Ecology and Environmental Research (2018), Vol. 16, No. 4, pp. 5127-5140	This paper is misrepresented as an epidemiologic cohort study. It is an informal community health risk survey with uncertain exposure assessment and uncertain health outcomes. The study population is poorly characterized. Uncertain temporal relationship between purported glyphosate drinking water exposure and disease outcome. The analysis was not appropriate for a cohort (or case control) study and is not relevant for glyphosate renewal.
1429	Toxicology and metabolism	Li M-H. et al.	2016	Multi-tissue metabolic responses of goldfish (<i>Carassius auratus</i>) exposed to glyphosate-based herbicide.	Toxicology Research (2016), Vol. 5, No. 4, pp. 1039-1052	This paper presents results of a glyphosate based herbicide tested on goldfish. The end-points defined are not relevant to the human health risk assessment for glyphosate renewal.
1430	Toxicology and metabolism	Li Q. et al.	2013	Glyphosate and AMPA inhibit cancer cell growth through inhibiting intracellular glycine synthesis.	Drug design, development and therapy (2013), Vol. 7, pp. 635-43	This paper described the therapeutic applications of glyphosate and AMPA at very high in vitro doses to cancer cells. This is deemed not relevant to the glyphosate renewal.
1431	Toxicology and metabolism	Li Z.	2018	The use of a disability-adjusted life-year (DALY) metric to measure human health damage resulting from pesticide maximum legal exposures.	Science of the Total Environment (2018), Vol. 639, pp. 438-456	This publication is considered not relevant because it concerns the development of a uniform metric (the disability-adjusted life-year; DALY) in risk characterisation to express the human health impact of pesticide exposure and not experimental data that can be used for the risk assessment of glyphosate.
1432	Toxicology and metabolism	Litvinko N. M. et al.	2015	The effect of N-(phosphonomethyl)-glycine on phospholytic reaction catalyzed by phospholipase A2	Vestsi Natsyyanal'nai Akademii Navuk Belarusi, Seryya Khimichnykh Navuk (2015), Vol. 3, pp. 91-100	Unrealistic in vitro concentrations of ≥ 100 mg/mL were tested in the study. Therefore not relevant to the renewal of glyphosate.
1433	Toxicology and metabolism	Loomba R. S.	2016	Prevalence of isomerism from a European registry: Live births, fetal deaths, and terminations of pregnancy.	Congenital Anomalies (2016), Vol. 56, No. 6, pp. 256-257	This paper does not mention glyphosate or AMPA and is not relevant.
1434	Toxicology and metabolism	Lopez Gonzalez E. C. et al.	2013	Induction of micronuclei in broad snouted caiman (<i>Caiman latirostris</i>) hatchlings exposed in vivo to Roundup® (glyphosate) concentrations used in agriculture	Pesticide biochemistry and physiology (2013), Vol. 105, No. 2, pp. 131-134	The formulation tested in reptiles (Roundup, undefined, uncharacterized) is not the representative formulation, and therefore the article is not relevant to the renewal.
1435	Toxicology and metabolism	Lorenz V. et al.	2019	Epigenetic disruption of estrogen receptor alpha is induced by a glyphosate-based herbicide in the preimplantation uterus of rats.	Molecular and cellular endocrinology (2019), Vol. 480, pp. 133-141	Formulation tested (MAGNUM SUPER II) marketed in Argentina by Grupo Agros S.R.L. and comprises 66.2% potassium salt and 54% w/v a.e. As this is not the representative formulation, the article is not relevant to the renewal.
1436	Toxicology and metabolism	Loro V. L. et al.	2015	Glyphosate-based herbicide affects biochemical parameters in <i>Rhamdia quelen</i> (Quoy & Gaimard, 1824 and) <i>Leporinus obtusidens</i> (Valenciennes, 1837).	Neotropical Ichthyology (2015), Vol. 13, No. 1, pp. 229-235	This study describes the application of high aquatic doses of glyphosate based herbicide with observed effects attributable to the surfactant present in the formulation. As this is not the representative formulation, the article is not relevant to the renewal.
1437	Toxicology and metabolism	Luaces J. P. et al.	2017	Genotoxic effects of Roundup Full II® on lymphocytes of <i>Chaetophractus villosus</i> (<i>Xenarthra</i> , <i>Mammalia</i>): In vitro studies.	PloS one (2017), Vol. 12, No. 8, pp. e0182911	Formulation tested in vivo (Roundup Full II, containing 66.2% glyphosate, Argentina). As this is not the representative formulation, the article is not relevant to the renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1438	Toxicology and metabolism	Luo L. et al.	2017	In vitro cytotoxicity assessment of roundup (glyphosate) in L-02 hepatocytes.	Journal of environmental science and health. Part. B, Pesticides, food contaminants, and agricultural wastes (2017), Vol. 52, No. 6, pp. 410-417	Formulation tested in vitro (Roundup, containing 41% isopropylamine salt; Belgium). The effects observed are due to high dosing of the surfactant in vitro, and as this is not the representative formulation, the article is not relevant to the renewal.
1439	Toxicology and metabolism	Mahakhode R. H. et al.	2013	Mitotic abnormalities induced by glyphosate in <i>Psoralea corylifolia</i> L..	International Journal of Current Pharmaceutical Research (2013), Vol. 5, No. 1, pp. 46-48	Tested a plant species with a herbicide for adverse end-points; the identified end-points are not relevant to human health and the renewal.
1440	Toxicology and metabolism	Malagoli C. et al.	2016	Passive exposure to agricultural pesticides and risk of childhood leukemia in an Italian community.	International journal of hygiene and environmental health (2016), Vol. 219, No. 8, pp. 742-748	This study did not perform any specific analyses for glyphosate. Furthermore, there was a very small case control study with a speculative exposure variable. This is not relevant for the renewal of glyphosate.
1441	Toxicology and metabolism	Mao Y. et al.	2015	Effect of glyphosate on serum biochemical indices of exposed workers	Zhongguo Gongye Yixue Zazhi (2015), Vol. 28, No. 5, pp. 362-364	The worker protections and manufacturing processes in China do not reflect Western occupational exposure scenarios. Therefore this is not relevant to glyphosate renewal.
1442	Toxicology and metabolism	Marcocchia D. et al.	2017	Food components and contaminants as (anti)androgenic molecules.	Genes and Nutrition (2017), Vol. 12, No. 1 pp. 6	This paper discusses some glyphosate literature, but does not provide new data. Therefore it cannot be used in the glyphosate risk assessments.
1443	Toxicology and metabolism	Marques A. et al.	2014	Progression of DNA damage induced by a glyphosate-based herbicide in fish (<i>Anguilla anguilla</i>) upon exposure and post-exposure periods--insights into the mechanisms of genotoxicity and DNA repair.	Comparative biochemistry and physiology. Toxicology & pharmacology (2014), Vol. 166, pp. 126-33	This study outlines the test of a glyphosate based herbicide to aquatic species. As this is not the representative formulation, the article is not relevant to the renewal.
1444	Toxicology and metabolism	Martinez M. et al.	2019	Use of human neuroblastoma SH-SY5Y cells to evaluate glyphosate-induced effects on oxidative stress, neuronal development and cell death signaling pathways.	Environment international (2019), Vol. 135, pp. 105414	This publication is considered not relevant for the risk assessment of glyphosate and AMPA as the concentrations used for the measurement of oxidative stress and apoptosis were beyond the physiologically acceptable range of 1 mM (5 and 10 mM).
1445	Toxicology and metabolism	Martini C. N. et al.	2012	A commercial formulation of glyphosate inhibits proliferation and differentiation to adipocytes and induces apoptosis in 3T3-L1 fibroblasts.	Toxicology in vitro (2012), Vol. 26, No. 6, pp. 1007-13	The formulation tested in vitro (commercial glyphosate formulation; 48% w/v, isopropylamine salt, from Atanor, Argentina) is not the representative formulation, and thus the article is not relevant to the renewal.
1446	Toxicology and metabolism	Martini C. N. et al.	2016	Glyphosate Inhibits PPAR Gamma Induction and Differentiation of Preadipocytes and is able to Induce Oxidative Stress.	Journal of biochemical and molecular toxicology (2016), Vol. 30, No. 8, pp. 404-13	Formulation tested in vitro at a single high dose in the mM range (Glifosato Atanor, containing 48% isopropylamine salt, 35.6% glyphosate, Argentina). As this is not the representative formulation, the article is not relevant to the renewal.
1447	Toxicology and metabolism	Martini C. N. et al.	2016	Glyphosate-based herbicides with different adjuvants are more potent inhibitors of 3T3-L1 fibroblast proliferation and differentiation to adipocytes than glyphosate alone.	Comparative Clinical Pathology (2016), Vol. 25, No. 3, pp. 607-613	In this paper, three glyphosate-based herbicides with different adjuvants were tested in vitro. Glyphosate only effects were noted only at excessively high doses > 20mM, this is physiologically not possible to attain in standard regulatory in vivo testing

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1448	Toxicology and metabolism	Marx-Stoelting P. et al.	2014	Assessment of three approaches for regulatory decision making on pesticides with endocrine disrupting properties	Regulatory Toxicology and Pharmacology (2014), Vol. 70, No. 3, pp. 590-604	No glyphosate specific information was presented in this paper and therefore this article is not relevant to the renewal.
1449	Toxicology and metabolism	Mesnager R. et al.	2013	Cytotoxicity on human cells of Cry1Ab and Cry1Ac Bt insecticidal toxins alone or with a glyphosate-based herbicide.	Journal of applied toxicology (2013), Vol. 33, No. 7, pp. 695-9	Not only was the glyphosate based herbicide formulation tested together with other substances (Roundup GT Plus containing 450 g/L glyphosate), this is not the representative formulation, the article is not relevant to the renewal.
1450	Toxicology and metabolism	Mesnager R. et al.	2015	Transcriptome profile analysis reflects rat liver and kidney damage following chronic ultra-low dose Roundup exposure.	Environmental health (2015), Vol. 14, article No. 70	Formulation tested (Grand Travaux Plus (450 g/L, Belgium) for non-validated endpoints therefore cannot be used in an EU Annex I renewal.
1451	Toxicology and metabolism	Mesnager R. et al.	2018	Multiomics reveal non-alcoholic fatty liver disease in rats following chronic exposure to an ultra-low dose of Roundup herbicide (vol 7, 39328, 2017).	Scientific Reports (2018), Vol. 8, pp. Article No.: 12572	The Roundup formulation tested in rats is not the representative formulation, and the article is not relevant to the renewal.
1452	Toxicology and metabolism	Meyer-Monath M. et al.	2014	Development of a multi-residue method in a fetal matrix: analysis of meconium	Analytical and Bioanalytical Chemistry (2014), Vol. 406, No. 30, pp. 7785-7797	This is primarily an analytical method paper for determination of multiple analytes (including glyphosate) in meconium. Actual meconium samples were analyzed. Minimal details of results provided, and no detections of glyphosate reported, therefore the report is not relevant.
1453	Toxicology and metabolism	Moreno N. C. et al.	2014	Genotoxic effects of the herbicide Roundup Transorb and its active ingredient glyphosate on the fish <i>Prochilodus lineatus</i> .	Environmental toxicology and pharmacology (2014), Vol. 37, No. 1, pp. 448-54	Formulation tested (Roundup Transorb® containing 480 g glyphosate /L, Monsanto Brazil Ltd). As this is not the representative formulation, and the article is not relevant to the renewal.
1454	Toxicology and metabolism	Morley W. A. et al.	2014	Diminished brain resilience syndrome: A modern day neurological pathology of increased susceptibility to mild brain trauma, concussion, and downstream neurodegeneration.	Surgical neurology international (2014), Vol. 5, pp. 97	Many hypotheses are discussed in this study with no data presented that could be used in a renewal dossier.
1455	Toxicology and metabolism	Moshhammer H. et al.	2019	Validity of reported indicators of pesticide exposure and relevance for cytotoxic and genotoxic effects on buccal cells.	Mutagenesis (2019), Vol. 34, No. 2, pp. 147-152	This publication is considered not relevant for the risk assessment of glyphosate as the association between pesticide use in general and genotoxicity and cytotoxicity markers in buccal cells was studied only, and not specifically glyphosate.
1456	Toxicology and metabolism	Murussi C. et al.	2014	Changes in oxidative markers, endogenous antioxidants and activity of the enzyme acetylcholinesterase in farmers exposed to agricultural pesticides - a pilot study	Ciencia Rural (2014), Vol. 44, No. 7, pp. 1186-1193	This pilot study evaluated the use of general pesticides only with a comparison between treated and non-treated. Glyphosate alone was not evaluated and as a result this study cannot be used in the renewal dossier.
1457	Toxicology and metabolism	Mwambulambo S. G. et al.	2018	Health symptoms associated with pesticides exposure among flower and onion pesticide applicators in Arusha region.	Annals of Global Health (2018), Vol. 84, No. 3, pp. 369-379	This document describes the use of PPE during general occupational pesticide use and is not relevant to the glyphosate renewal dossier.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1458	Toxicology and metabolism	Nagy K. et al.	2020	Systematic review of comparative studies assessing the toxicity of pesticide active ingredients and their product formulations.	Environmental research (2020), Vol. 181, pp. 108926	This is a review paper with no new data presented. Therefore is not relevant to the glyphosate risk assessments.
1459	Toxicology and metabolism	Nardi J. et al.	2017	Prepubertal subchronic exposure to soy milk and glyphosate leads to endocrine disruption.	Food and chemical toxicology (2017), Vol. 100, pp. 247-252	A paper describing a glyphosate formulation co-dosed with phytoestrogen. As this is a mixture the effects cannot be determined for glyphosate alone and thus the paper is not relevant for the renewal dossier.
1460	Toxicology and metabolism	Naz S. et al.	2019	Effect of glyphosate on hematological and biochemical parameters of Rabbit (<i>Oryctolagus cuniculus</i>)	Pure and Applied Biology (2019), Vol. 8, No. 1, pp. 78-92	Rabbits gavaged with a glyphosate based herbicide (Glyphosate comprised 48% of the formulation with another 48% glyphosate IPA (isopropylammonium) salt) sourced in Pakistan. As this is not the representative formulation, and the article is not relevant to the renewal.
1461	Toxicology and metabolism	Negga R. et al.	2012	Exposure to glyphosate- and/or Mn/Zn-ethylene-bis-dithiocarbamate-containing pesticides leads to degeneration of γ -aminobutyric acid and dopamine neurons in <i>Caenorhabditis elegans</i> .	Neurotoxicity research (2012), Vol. 21, No. 3, pp. 281-90	This study describes invertebrate tests performed using a glyphosate based herbicide. As this is not the representative formulation, and the article is not relevant to the renewal.
1462	Toxicology and metabolism	Nippanon P. et al.	2019	Chemical pesticide use and quality of life of rubber farmers in the Northeast of Thailand.	Kathmandu University Medical Journal (2019), Vol. 17, No. 65	A paper evaluating the handling of agrochemicals as a risk factor, rather than individual pesticides. Similarly, only the percentage of farmers using glyphosate was reported.
1463	Toxicology and metabolism	Nishiyori Y. et al.	2014	Unilateral hippocampal infarction associated with an attempted suicide: a case report.	Journal of medical case reports (2014), Vol. 8, pp. 219	Glyphosate does not cross the blood brain barrier and does not cause neurotoxicity. Nor would it be expected that glyphosate ingestion unilaterally targets the dorsal part of the left hippocampus. This presentation is much more consistent with a small vessel embolic event and the patient should have been evaluated for risk factors for stroke such as atrial fibrillation or carotid atherosclerosis. Not relevant for the risk assessment.
1464	Toxicology and metabolism	Nobels I. et al.	2011	Toxicity Ranking and Toxic Mode of Action Evaluation of Commonly Used Agricultural Adjuvants on the Basis of Bacterial Gene Expression Profiles	PLOS ONE (2011), Vol. 6, No. 11, pp. E24139	A study on commonly used adjuvants and solvents in pesticide formulations, however no glyphosate or Roundup specific data is mentioned therefore the study is not relevant for the renewal dossier.
1465	Toxicology and metabolism	Norskov N. P. et al.	2019	Robust and highly sensitive micro liquid chromatography-tandem mass spectrometry method for analyses of polar pesticides (glyphosate, aminomethylphosphonic acid, N-acetyl glyphosate and N-acetyl aminomethylphosphonic acid) in multiple biological matrices.	Journal of chromatography. A (2019), Vol. 1605, pp. 360343	This paper concerns development of a glyphosate assay and is likely a precursor to a gut microbe study. No animal data and no information relevant for the risk assessment were presented.
1466	Toxicology and metabolism	Nur G. et al.	2018	Histopathological and biochemical responses to the oxidative stress induced by glyphosate-based herbicides in the rainbow trout (<i>Oncorhynchus mykiss</i>)	Journal of Cellular Neuroscience and Oxidative Stress (2018), Vol. 10, No. 1, pp. 656-665	A glyphosate based herbicide was tested in aquatic species, without positive control to verify validity of the assay. Gill damage is directly attributable to the surfactant present in the formulation, with oxidative stress a consequence of cell damage.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1467	Toxicology and metabolism	Nwani C. D. et al.	2014	Induction of micronuclei and nuclear lesions in <i>Channa punctatus</i> following exposure to carbosulfan, glyphosate and atrazine.	Drug and chemical toxicology (2014), Vol. 37, No. 4, pp. 370-7	A glyphosate based herbicide (Roundup SL; India; 41% soluble liquid) was tested in aquatic species. This study discusses cellular and molecular level end-points that are not relevant to an EU level ecotoxicology risk assessment.
1468	Toxicology and metabolism	Owring I. et al.	2013	Antioxidant effect of ginger on the pituitary-gonadal axis hormones recovered from the devastating effects of the herbicide Glyphosate in female rats	International Journal of Biology, Pharmacy and Allied Sciences (2013), Vol. 2, No. 8, pp. 1606-1616	Dosing via i.p. injection daily for three weeks is not relevant. The glyphosate source is not described at all. It is not clear whether this study dosed a glyphosate based herbicide, a technical acid or salt.
1469	Toxicology and metabolism	Pandey A. et al.	2019	Inflammatory Effects of Subacute Exposure of Roundup in Rat Liver and Adipose Tissue.	Dose-response (2019), Vol. 17, No. 2, pp. 1	The formulation tested in this study (Herbicide Roundup, 41% w/w glyphosate, Monsanto India Ltd, Mumbai, India) is not the representative formulation and is not relevant to the renewal.
1470	Toxicology and metabolism	Parajuli K. R. et al.	2015	Aminomethylphosphonic acid and methoxyacetic acid induce apoptosis in prostate cancer cells.	International journal of molecular sciences (2015), Vol. 16, No. 5, pp. 11750-65	In this study the therapeutic use of AMPA was evaluated rather than glyphosate. Therefore it is not relevant to the renewal.
1471	Toxicology and metabolism	Parajuli K. R. et al.	2016	Aminomethylphosphonic acid inhibits growth and metastasis of human prostate cancer in an orthotopic xenograft mouse model.	Oncotarget (2016), Vol. 7, No. 9, pp. 10616-26	In this study the therapeutic use of AMPA was evaluated rather than glyphosate. Therefore it is not relevant to the renewal.
1472	Toxicology and metabolism	Paumgarten F. J. R.	2019	Comment on 'Perinatal exposure to a glyphosate-based herbicide impairs female reproductive outcomes and induces second-generation adverse effects in Wistar rats', Arch Toxicol 92:2629-2643 : On the impairment of female reproductive performance by developm	Archives of toxicology (2019), Vol. 93, No. 3, pp. 831-832	Letter refers to a previous paper published by Milesi et al (Perinatal exposure to a glyphosate-based herbicide impairs.; Arch Toxicol 2018, 92(8):2629–2643.): Milesi et al is not in Marian's LRR2 list.
1473	Toxicology and metabolism	Perego M. C. et al.	2017	Influence of a Roundup formulation on glyphosate effects on steroidogenesis and proliferation of bovine granulosa cells in vitro.	Chemosphere (2017), Vol. 188, pp. 274-279	This study examines the in vitro formulation effects only, rather than glyphosate alone.
1474	Toxicology and metabolism	Perez-Torres I. et al.	2017	Beneficial Effects of the Amino Acid Glycine.	Mini reviews in medicinal chemistry (2017), Vol. 17, No. 1, pp. 15-32	This paper does not contain any data pertaining to glyphosate and is therefore not relevant.
1475	Toxicology and metabolism	Peters C. E. et al.	2018	Priority Setting for Occupational Cancer Prevention.	Safety and Health at Work (2018), Vol. 9, No. 2, pp. 133-139	This paper does not contain any data pertaining to glyphosate and is therefore not relevant
1476	Toxicology and metabolism	Portier C. J. et al.	2016	Differences in the carcinogenic evaluation of glyphosate between the International Agency for Research on Cancer (IARC) and the European Food Safety Authority (EFSA).	Journal of epidemiology and community health (2016), Vol. 70, No. 8, pp. 741-5	This publication is considered not relevant because it is not based on experimental data.
1477	Toxicology and metabolism	Pouokam G. B. et al.	2017	A Pilot Study in Cameroon to Understand Safe Uses of Pesticides in Agriculture, Risk Factors for Farmers' Exposure and Management of Accidental Cases.	Toxics (2017), Vol. 5, No. 4	This paper does not contain any data pertaining to glyphosate and is therefore not relevant.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1478	Toxicology and metabolism	Qiu S. et al.	2020	Toxic effects of glyphosate on intestinal morphology, antioxidant capacity and barrier function in weaned piglets.	Ecotoxicology and environmental safety (2020), Vol. 187, pp. 109846	This study investigates glyphosate based herbicides dosed to piglets. As this is not the representative formulation, and the article is not relevant to the renewal.
1479	Toxicology and metabolism	Ramsden J. J.	2017	Assaults on health.	Journal of Biological Physics and Chemistry (2017), Vol. 17, No. 1, pp. 3-7	Commentary on various threats to human health and not directly relevant to the renewal.
1480	Toxicology and metabolism	Rappazzo K. M. et al.	2019	Maternal residential exposure to specific agricultural pesticide active ingredients and birth defects in a 2003-2005 North Carolina birth cohort.	Birth defects research (2019), Vol. 111, No. 6, pp. 312-323	Highly speculative exposure assessment limited to pesticides makes it impossible to adequately assess results. Therefore this study is not relevant.
1481	Toxicology and metabolism	Robert J. R. et al.	2013	Council on Environmental Health. Technical Report: Pesticide Exposure in Children (vol 130, pg e1765, 2012).	Pediatrics (2013), Vol. 131, No. 5, pp. 1013-1014	This paper does not contain any data pertaining to glyphosate and is therefore not relevant.
1482	Toxicology and metabolism	Rojas Garcia A. E. et al.	2018	Special issue on pesticide contamination and toxicology. Numero especial: Contaminacion y toxicologia por plaguicidas	Revista Internacional de Contaminacion Ambiental (2018), Vol. 34, pp. 7-105	A special issue with seven articles that were either reviews discussing glyphosate, or not relevant to glyphosate.
1483	Toxicology and metabolism	Romano M. A. et al.	2012	Glyphosate impairs male offspring reproductive development by disrupting gonadotropin expression.	Archives of toxicology (2012), Vol. 86, No. 4, pp. 663-73	This publication is considered not relevant for the risk assessment of glyphosate as a glyphosate based herbicide (Roundup Transorb) has been tested instead of glyphosate.
1484	Toxicology and metabolism	Romano M. A. et al.	2012	Reply to comment of John M. DeSesso and Amy L. Williams regarding "Glyphosate impairs male offspring reproductive development by disrupting gonadotropin expression" by Romano et al. 2012	Archives of Toxicology (2012), Vol. 86, No. 11, pp. 1795-1797	This article reflects the categorization of the original article which was classified as not relevant.
1485	Toxicology and metabolism	Romano R. M. et al.	2010	Prepubertal exposure to commercial formulation of the herbicide glyphosate alters testosterone levels and testicular morphology.	Archives of toxicology (2010), Vol. 84, No. 4, pp. 309-17	The test material was a glyphosate-based formulation and not the reference formulation MON 52276 and is therefore not relevant
1486	Toxicology and metabolism	Roongruangchai J. et al.	2018	The teratogenic effects of glyphosate based herbicide (GBH) on the development of chick embryos.	Siriraj Medical Journal (2018), Vol. 70, No. 5, pp. 419-428	This report studies the injection of glyphosate based fertilisers into fertilized chicken eggs. As this is not the representative formulation, the article is not relevant to the renewal.
1487	Toxicology and metabolism	Salaroli L. et al.	2019	Occupational Exposure to Agrochemicals, Risks and Safety Practices in Family Agriculture in a Municipality of the State of Espirito Santo, Brazil (P04-077-19).	Current developments in nutrition (2019), Vol. 3, No. Suppl 1, pp. 259	General pesticide review of occupational exposures and safety practices and not relevant for the renewal.
1488	Toxicology and metabolism	Samsel A. et al.	2013	Glyphosate, pathways to modern diseases II: Celiac sprue and gluten intolerance.	Interdisciplinary toxicology (2013), Vol. 6, No. 4, pp. 159-84	This publication is considered not relevant for the risk assessment of glyphosate because it is not based on experimental work and no epidemiologic methodology was followed.
1489	Toxicology and metabolism	Samsel A. et al.	2015	Glyphosate, pathways to modern diseases III: Manganese, neurological diseases, and associated pathologies.	Surgical neurology international (2015), Vol. 6, pp. 45	This publication is considered not relevant for the risk assessment of glyphosate because it is not based on experimental work and no epidemiologic methodology was followed.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1490	Toxicology and metabolism	Samsel A. et al.	2013	Glyphosate's suppression of cytochrome P450 enzymes and amino acid biosynthesis by the gut microbiome: pathways to modern diseases	Entropy (2013), Vol. 15, pp. 1416-1463	This publication is considered not relevant for the risk assessment of glyphosate because it is not based on experimental work and no epidemiologic methodology was followed.
1491	Toxicology and metabolism	Samsel A. et al.	2015	Glyphosate, pathways to modern diseases IV: cancer and related pathologies.	Journal of Biological Physics and Chemistry (2015), Vol. 15, No. 3, pp. 121-159	This publication is considered not relevant for the risk assessment of glyphosate because it is not based on experimental work and no epidemiologic methodology was followed.
1492	Toxicology and metabolism	Samsel A. et al.	2016	Glyphosate pathways to modern diseases V: Amino acid analogue of glycine in diverse proteins.	Journal of Biological Physics and Chemistry (2016), Vol. 16, No. 1, pp. 9-46	This publication is considered not relevant for the risk assessment of glyphosate because it is not based on experimental work and no epidemiologic methodology was followed.
1493	Toxicology and metabolism	Samsel A. et al.	2017	Glyphosate pathways to modern diseases VI: Prions, amyloidoses and autoimmune neurological diseases.	Journal of Biological Physics and Chemistry (2017), Vol. 17, No. 1, pp. 8-32	This publication is considered not relevant for the risk assessment of glyphosate because it is not based on experimental work and no epidemiologic methodology was followed.
1494	Toxicology and metabolism	Scammell M. K. et al.	2019	Environmental and Occupational Exposures in Kidney Disease.	Seminars in Nephrology (2019), Vol. 39, No. 3, pp. 230-243	This paper does not contain any new data pertaining to glyphosate and is therefore not relevant.
1495	Toxicology and metabolism	Schaumburg L. G. et al.	2016	Genotoxicity induced by Roundup® (Glyphosate) in tegu lizard (Salvator merianae) embryos.	Pesticide biochemistry and physiology (2016), Vol. 130, pp. 71-78	A glyphosate based herbicide was tested in lizard eggs. As this was not the representative formulation the article is not relevant to the renewal.
1496	Toxicology and metabolism	Seneff S. et al.	2015	Death as a drug side effect in FAERS: is glyphosate contamination a factor?	Agricultural Sciences (2015), Vol. 6, No. 12, pp. 1472-1501	Within this report, hypotheses are discussed without any empirical data. Therefore it is not relevant to the renewal.
1497	Toxicology and metabolism	Seneff S. et al.	2015	Aluminum and glyphosate can synergistically induce pineal gland pathology: connection to gut dysbiosis and neurological disease.	Agricultural Sciences (2015), Vol. 6, No. 1, pp. 42-70	This paper is not relevant as it is not based on experimental work and no epidemiologic methodology was followed. Conclusion (glyphosate and aluminium, operate synergistically to induce dysfunction in the pineal gland leading to the sleep disorder that is characteristic of multiple neurological diseases, including autism, ADHD, depression, Alzheimer's disease, ALS, anxiety disorder and Parkinson's disease) is pure speculation and is not corroborated by current experimental data.
1498	Toxicology and metabolism	Seneff S. et al.	2017	Can glyphosate's disruption of the gut microbiome and induction of sulfate deficiency explain the epidemic in gout and associated diseases in the industrialized world?	Journal of Biological Physics and Chemistry (2017), Vol. 17, No. 2, pp. 53-76	Study is not relevant as it is not based on experimental work and no epidemiologic methodology was followed. Results and proposed mode of actions are speculation without any experimental proof.
1499	Toxicology and metabolism	Seneff S. et al.	2013	Is encephalopathy a mechanism to renew sulfate in autism?	Entropy (2013), Vol. 15, pp. 372-406	This paper presents hypotheses without data and is not relevant.
1500	Toxicology and metabolism	Seralini G. E.	2015	Why glyphosate is not the issue with Roundup A short overview of 30 years of our research.	Journal of Biological Physics and Chemistry (2015), Vol. 15, No. 3, pp. 111-119	A review of glyphosate vs formulations. Secondary source of information, not experimental data presented.
1501	Toxicology and metabolism	Seralini G. E. et al.	2014	Conclusiveness of toxicity data and double standards	FOOD AND CHEMICAL TOXICOLOGY (2014), Vol. 69, pp. 357-359	This is a commentary of a Seralini paper retraction and not relevant.
1502	Toxicology and metabolism	Seralini G. E. et al.	2014	Conflicts of interests, confidentiality and censorship in health risk assessment: the example of an herbicide and a GMO.	Environmental Sciences Europe (2014), Vol. 26, No. 13, pp. 1	This is a commentary article and not relevant.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1503	Toxicology and metabolism	Seralini G. et al.	2012	Long term toxicity of a Roundup herbicide and a Roundup-tolerant genetically modified maize.	Food and chemical toxicology (2012), Vol. 50, No. 11, pp. 4221-31	This paper is a retraction announcement from the journal publishers and not relevant.
1504	Toxicology and metabolism	Seralini G. et al.	2014	Republished study: long-term toxicity of a Roundup herbicide and a Roundup-tolerant genetically modified maize.	Environmental sciences Europe (2014), Vol. 26, No. 1, pp. 14	This publication is considered not relevant for risk assessment of glyphosate because a glyphosate formulation was used instead of glyphosate.
1505	Toxicology and metabolism	Siddiqui S. et al.	2012	Glyphosate, alachor and maleic hydrazide have genotoxic effect on <i>Trigonella foenum-graecum</i> L.	Bulletin of environmental contamination and toxicology (2012), Vol. 88, No. 5, pp. 659-65	Not valid to evaluate genotoxicity of herbicides on the plant species tested.
1506	Toxicology and metabolism	Soudani N. et al.	2019	Glyphosate disrupts redox status and up-regulates metallothionein I and II genes expression in the liver of adult rats. Alleviation by quercetin.	General physiology and biophysics (2019), Vol. 38, No. 2, pp. 123-134	This publication is considered not relevant for the risk assessment of glyphosate because the route of administration used was not appropriate (intraperitoneal injection).
1507	Toxicology and metabolism	Stur E. et al.	2019	Glyphosate-based herbicides at low doses affect canonical pathways in estrogen positive and negative breast cancer cell lines.	PloS one (2019), Vol. 14, No. 7, pp. e0219610	This publication is considered not relevant for the risk assessment of glyphosate as the concentration of AMPA used (10 mM) is beyond the physiologically acceptable range (> 1 mM). Evaluation of a glyphosate-based herbicide in in vitro systems is not relevant to the risk assessment of glyphosate due to the effects of surfactants on cells.
1508	Toxicology and metabolism	Swanson N. L. et al.	2014	Genetically engineered crops, glyphosate and the deterioration of health in the United States of America.	Journal of Organic Systems (2014), Vol. 9, No. 2, pp. 6-37	This publication is considered not relevant for the risk assessment of glyphosate as no epidemiological approach was followed to establish an association between exposure to glyphosate and disease outcome.
1509	Toxicology and metabolism	Szabo R. et al.	2017	Studies on joint toxic effects of a glyphosate herbicide (Fozat 480) and a heavy metal (cadmium) on chicken embryos.	AGROFOR International Journal (2017), Vol. 2, No. 3, pp. 37-43	Glyphosate based herbicide applied to fertilized chicken eggs, is not the representative formulation and not relevant to human health risk assessment.
1510	Toxicology and metabolism	Szemeredy G. et al.	2016	TOXICITY TEST OF INDIVIDUAL AND COMBINED TOXIC EFFECTS OF HERBICIDE GLIALKA STAR AND LEAD-ACETATE ON CHICKEN EMBRYOS. Original Title: GLIALKA STAR GYOMIRTO SZER ES AZ OLOM-ACETAT EGYEDI ES INTERAKCIOS TOXICITASANAK VIZSGALATA MADAREMBRIOKBAN.	Novenyvdelem (2016), Vol. 52, No. 10, pp. 483-487	Formulation tested via injection to chicken embryos. This is not a typical route of exposure. Tested formulation was not the representative formulation for the renewal.
1511	Toxicology and metabolism	Szezanowski F. et al.	2018	Glyphosate-based herbicide, but not pure glyphosate, affects peripheral nervous system myelination.	European Journal of Neurology (2018), Vol. 25, Supp. 2, pp. 567.	Effects observed in this study were noted with a glyphosate based herbicide only in vitro. In addition, as this was not the representative formulation the article is not relevant to the renewal.
1512	Toxicology and metabolism	Teleken J. L. et al.	2019	Glyphosate-based herbicide exposure during pregnancy and lactation malprograms the male reproductive morphofunction in F1 offspring.	Journal of developmental origins of health and disease (2019), Vol. 11, No. 2, pp 146-153	This study described a glyphosate based herbicide dosed to mice. As this was not the representative formulation the article is not relevant to the renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1513	Toxicology and metabolism	Tincher C. et al.	2017	The Glyphosate-Based Herbicide Roundup Does not Elevate Genome-Wide Mutagenesis of <i>Escherichia coli</i> .	G3 (Bethesda, Md.) (2017), Vol. 7, No. 10, pp. 3331-3335	This publication is considered not relevant for the risk assessment of glyphosate as a glyphosate based formulation was used instead of glyphosate for in vitro testing.
1514	Toxicology and metabolism	Tizhe E. et al.	2018	Pancreatic function and histoarchitecture in Wistar rats following chronic exposure to Bushfire®: the mitigating role of zinc.	The Journal of international medical research (2018), Vol. 46, No. 8, pp. 3296-3305	The formulation tested (BushfireVR, containing 441 g/L potassium salt; 360 g a.e./L) is not the representative formulation the article is not relevant to the renewal.
1515	Toxicology and metabolism	Tizhe E. V. et al.	2014	Serum biochemical assessment of hepatic and renal functions of rats during oral exposure to glyphosate with zinc.	Comparative clinical pathology (2014), Vol. 23, pp. 1043-1050	This publication is considered not relevant for the risk assessment of glyphosate as a combination of zinc chloride and a glyphosate formulation (Bushfire) has been used instead of glyphosate.
1516	Toxicology and metabolism	Tizhe E. V. et al.	2019	Effect of zinc on erythrocyte osmotic fragility and hemogram following chronic exposure to glyphosate-based herbicide in Wistar rats	Comparative Clinical Pathology (2019), Vol. 28, pp. 1275-1279	Formulation tested (BUSHFIRE, Ningbo Agro-star Industrial Co., Ltd., Zhejiang, China; 441 g/L potassium salt, 360 g/L a.e.). As this was not the representative formulation the article is not relevant to the renewal.
1517	Toxicology and metabolism	Tsatsakis A. M. et al.	2019	Hormetic Neurobehavioral effects of low dose toxic chemical mixtures in real-life risk simulation (RLRS) in rats	Food and Chemical Toxicology (2019), 125, 141-149	The test material was a mixture of thirteen different chemicals and cannot be interpreted for glyphosate alone.
1518	Toxicology and metabolism	Turkmen R. et al.	2019	Prenatal and neonatal exposure to glyphosate-based herbicide reduces the primordial to primary follicle transition in the newborn rat ovary: a preliminary study	Kocatepe Veterinary Journal (2019), Vol. 12, No. 2, pp. 168-177	Rats gavaged with a glyphosate based herbicide [Knockdown 48 SL; Safa Agriculture Inc., Turkey] As this was not the representative formulation the article is not relevant to the renewal.
1519	Toxicology and metabolism	Turkmen R. et al.	2019	Protective effects of resveratrol on biomarkers of oxidative stress, biochemical and histopathological changes induced by sub-chronic oral glyphosate-based herbicide in rats.	Toxicology research (2019), Vol. 8, No. 2, pp. 238-245	This paper describes high oral gavage dosing of a glyphosate based herbicide. As this is not the representative formulation the article is not relevant to the renewal.
1520	Toxicology and metabolism	Turkmen R. et al.	2019	Antioxidant and cytoprotective effects of N-acetylcysteine against subchronic oral glyphosate-based herbicide-induced oxidative stress in rats.	Environmental science and pollution research international (2019), Vol. 26, No. 11, pp. 11427-11437	The formulation tested in this article (Knockdown 48SL, Safa Agriculture Corp., Turkey; containing 480 g/L isopropylamine salt) is not the representative formulation and is not relevant to the renewal.
1521	Toxicology and metabolism	Upadhyay J. et al.	2019	Biomarker responses (serum biochemistry) in pregnant female wistar rats and histopathology of their neonates exposed prenatally to pesticides	Brazilian Journal of Pharmaceutical Sciences (2019), Vol. 55, pp. e18194	In this report a glyphosate based herbicide was tested (Topper 77; Crystal Crop Protection Pvt. Ltd. India) at one dose to six rats and compared with controls. As this was not the representative formulation the article is not relevant to the renewal.
1522	Toxicology and metabolism	Vandenberg L. N. et al.	2017	Is it time to reassess current safety standards for glyphosate-based herbicides?.	Journal of epidemiology and community health (2017), Vol. 71, No. 6, pp. 613-618	This publication is considered not relevant because it is not based on experimental work.
1523	Toxicology and metabolism	Varayoud J. et al.	2017	Effects of a glyphosate-based herbicide on the uterus of adult ovariectomized rats.	Environmental toxicology (2017), Vol. 32, No. 4, pp. 1191-1201	This publication is considered not relevant for the risk assessment of glyphosate as a non-representative glyphosate formulation was tested instead of glyphosate.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1524	Toxicology and metabolism	Vinceti M. et al.	2017	Pesticide exposure assessed through agricultural crop proximity and risk of amyotrophic lateral sclerosis.	Environmental Health (2017), Vol. 16, No. 1. pp. 91	This article does not demonstrate correlations with glyphosate use and effect and is therefore not relevant.
1525	Toxicology and metabolism	Von Ehrenstein O. S. et al.	2019	Prenatal and infant exposure to ambient pesticides and autism spectrum disorder in children: Population based case-control study	BMJ (Online) (2019), Vol. 364, pp. 1962	This publication is not relevant for the risk assessment of glyphosate with relation to ED because the pathology investigated is not ED related (autism spectrum disorder in children).
1526	Toxicology and metabolism	Wallace Hayes A.	2014	Editor in Chief of Food and Chemical Toxicology answers questions on retraction	Food and chemical toxicology (2014), Vol. 65, pp. 394-5	Letter from editor on Seralini retraction (2012) -> #2472, 3617, 5654 (all not relevant)
1527	Toxicology and metabolism	Wang F. et al.	2018	Advance on clinical study of glyphosate toxicity.	Journal of Environmental & Occupational Medicine (2018), Vol. 35, No. 2, pp. 175-179	A review and summary of selected literature.
1528	Toxicology and metabolism	Wilhelm C. M. et al.	2015	Assessment of DNA damage in floriculturists in southern Brazil	Environmental Science and Pollution Research (2015), Vol. 22, No. 11, pp. 8182-8189	No glyphosate specific conclusions, confounded due to multiple pesticide uses.
1529	Toxicology and metabolism	Wilke R. A. et al.	2019	Chronic Kidney Disease in Agricultural Communities	AMERICAN JOURNAL OF MEDICINE (2019), Vol. 132, No. 10, pp. E727-E732	Discussion of different factors that could be used to predict prevalence of chronic kidney disease in the US.
1530	Toxicology and metabolism	Witherspoon N. O.	2019	Protecting children from known pesticides exposures: our collective duty to provide primary prevention.	Pediatric Research (2019), Vol. 85, No. 2, pp. 118-119	Study does not include data on glyphosate and is therefore not relevant.
1531	Toxicology and metabolism	Wongta A. et al.	2018	The Pesticide Exposure of People Living in Agricultural Community, Northern Thailand.	Journal of toxicology (2018), Vol. 2018, pp. 4168034	Farming practices in Thailand are not applicable to European farmer exposure scenarios.
1532	Toxicology and metabolism	Wozniak E. et al.	2018	The mechanism of DNA damage induced by Roundup 360 PLUS, glyphosate and AMPA in human peripheral blood mononuclear cells - genotoxic risk assesment.	Food and chemical toxicology (2018), Vol. 120, pp. 510-522	In vitro effects only noted at excessively high doses greater than 100-250 uM. Therefore this article is not relevant to the risk assessment.
1533	Toxicology and metabolism	Wumbei A. et al.	2019	Pesticides use and exposure among yam farmers in the Nanumba traditional area of Ghana.	Environmental monitoring and assessment (2019), Vol. 191, No. 5, pp. 307	Article is not relevant to agricultural practices and glyphosate uses in Europe.
1534	Toxicology and metabolism	Youness E. R. et al.	2016	The protective effect of orange juice on glyphosate toxicity in adult male mice.	Journal of Chemical and Pharmaceutical Research (2016), Vol. 8, No. 3, pp. 13-28	This study uses excessively high gavage doses to rats and is not relevant to renewal.
1535	Toxicology and metabolism	Yu H. et al.	2013	The antagonistic effects of tea polyphenols on damage of mouse Sertoli cells induced by glyphosate.	Acta Nutrimenta Sinica (2013), Vol. 35, No. 3, pp. 283-287	In vitro study testing of what appears to be a formulated product, described as, glyphosate (41% Isopropylamine Hydrochloride, Monsanto glyphosate (41% Isopropylamine Hydrochloride, Monsanto), dosed at 10-160 ug/mL (high glyphosate levels of 24-390 uM plus surfactant), well above any potential physiological concentrations in sertoli cells.
1536	Toxicology and metabolism	Yu N. et al.	2018	Circular RNA expression profiles in hippocampus from mice with perinatal glyphosate exposure.	Biochemical and biophysical research communications (2018), Vol. 501, No. 4, pp. 838-845	This publication is considered not relevant for risk assessment of glyphosate with relation to ED because a no ED related endpoint was investigated (circular RNA expression profiles in the hippocampus).
1537	Toxicology and metabolism	Zanardi M. V. et al.	2019	Glyphosate-based herbicide induces hyperplastic ducts in the mammary gland of aging Wistar rats.	Molecular and cellular endocrinology (2019), Vol. 501, pp. 110658	This study examines the effects of glyphosate based herbicide dosed to rats. As this is not the representative formulation the article is not relevant to the renewal.

No	Technical section	Author(s)	Year	Title	Source	Reason for not including publication in dossier (based on relevance and reliability criteria)
1538	Toxicology and metabolism	Zhang H.-C. et al.	2018	Molecular cloning, characterization, expression and enzyme activity of catalase from planarian <i>Dugesia japonica</i> in response to environmental pollutants.	Ecotoxicology and environmental safety (2018), Vol. 165, pp. 88-95	Novel microbial test system of questionable relevance to human health risk assessment.
1539	Toxicology and metabolism	Zhao W. et al.	2013	Effects of glyphosate on apoptosis and expressions of androgen-binding protein and vimentin mRNA in mouse Sertoli cells	Journal of Southern Medical University (2013), Vol. 33, No. 11, pp. 1709-13	Not relevant. In vitro testing of a glyphosate based herbicide.
1540	Toxicology and metabolism	Zhao W-H. et al.	2016	THE PROTECTIVE EFFECTS OF TEA POLYSACCHARIDES ON INJURY AND APOPTOSIS OF MOUSE SERTOLY CELLS INDUCED BY GLYPHOSATE.	Current Topics in Nutraceutical Research (2016), Vol. 14, No. 1, pp. 81-90	Not relevant. In vitro testing of a glyphosate based herbicide.
1541	Toxicology and metabolism	Zhu J. et al.	2018	An Effective Machine Learning Approach for Identifying the Glyphosate Poisoning Status in Rats Using Blood Routine Test	IEEE ACCESS (2018), Vol. 6, pp. 15653-15662	Test substance source not identified, not clear whether glyphosate or formulation administered to animals. Data used in development of machine learning.
1542	Toxicology and metabolism	Zoccali C.	2017	Causal mechanism and component causes in Mesoamerican-Sri Lankan nephropathy: the moderator's view	NEPHROLOGY DIALYSIS TRANSPLANTATION (2017), Vol. 32, No. 4, pp. 607-610	No glyphosate specific information provided.

Appendix 1: AGG ADVICE on how to present the literature search in the dossier

ASSESSMENT GROUP ON GLYPHOSATE (AGG)

October 2019

**ADVICE TO GTF2:
HOW TO PRESENT THE LITERATURE SEARCH
IN THE DOSSIER TO BE SUBMITTED JUNE 2020**

The literature search should be carried out and presented as recommended in the EFSA Guidance EFSA Journal 2011;9(2):2092) including its recently published Appendix, available at the EFSA Journal.

**Rapid assessment of
titles/abstracts:**

Articles that are
considered as **not
relevant**:

Not necessary to submit
articles or study
summaries but
justification needed at a
general level, i.e. criteria
used to classify references
as being clearly non-
relevant.

**Detailed assessment of
full text of articles:**
Articles that are
considered as **not
relevant**
or
considered **not reliable**:

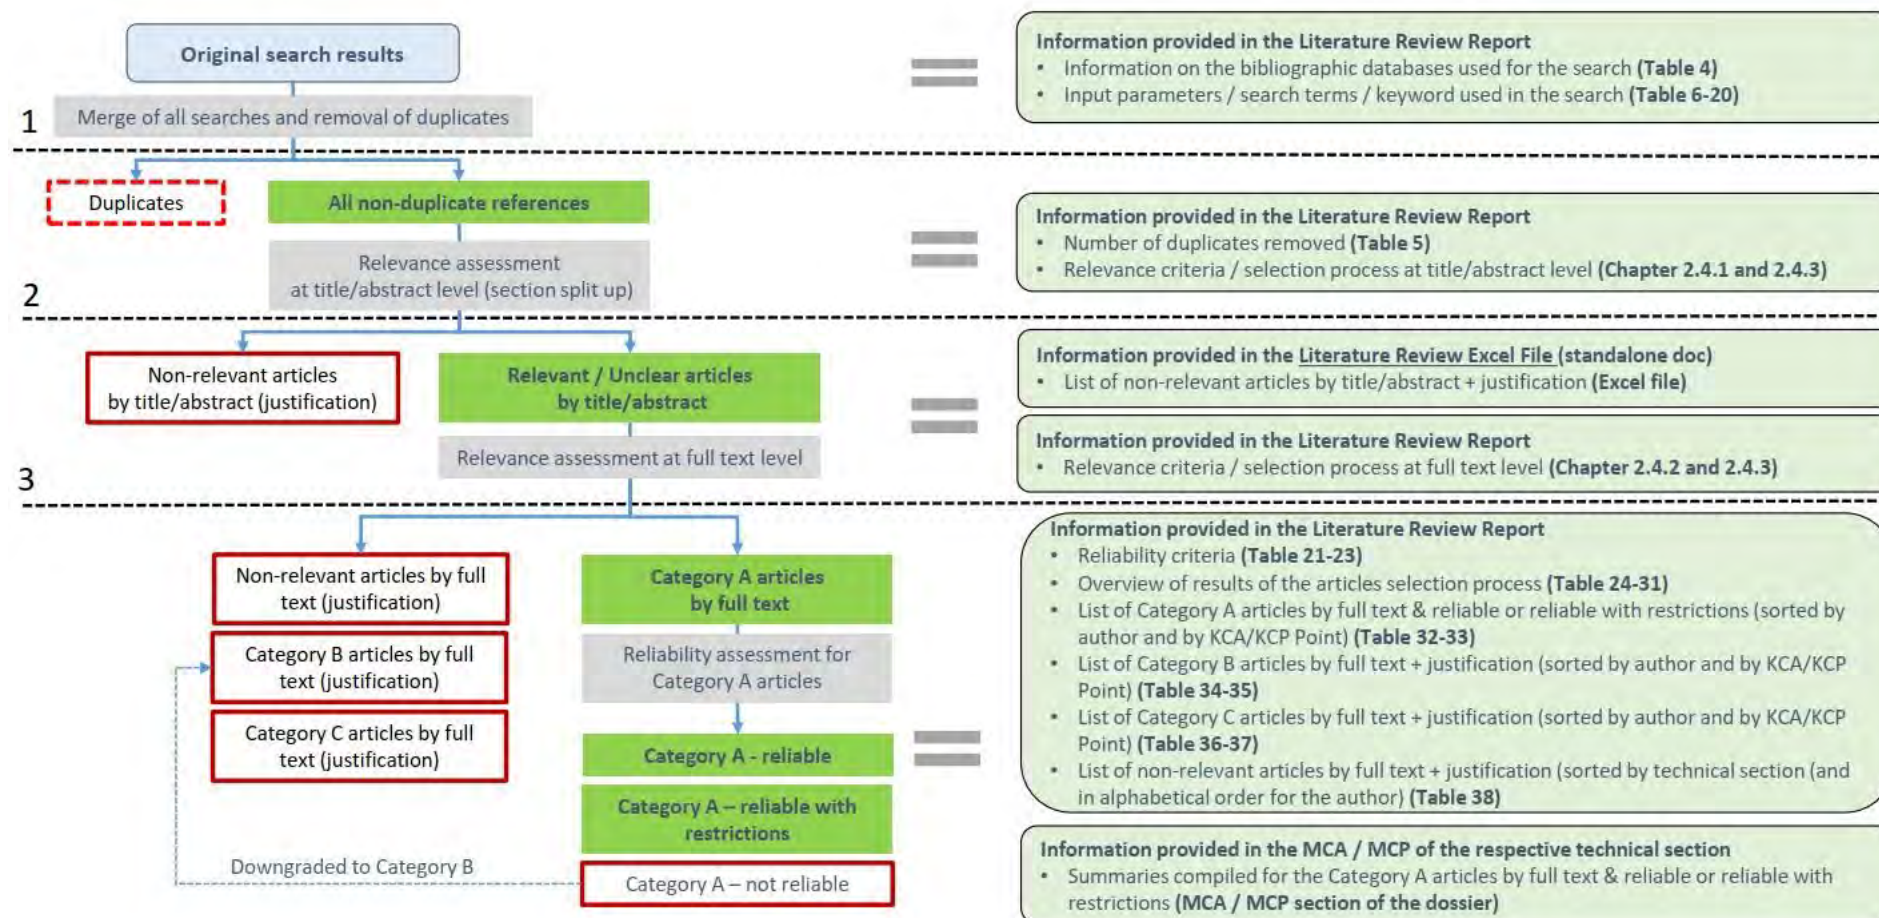

Necessary to submit
articles and statement
with the reason of
rejection (no study
summaries).

**Detailed assessment of
full text of articles:**
Articles considered as
relevant and reliable:

Necessary to submit
articles. A detailed study
summary should be
provided in the relevant
section of Doc
MCA/MCP.

For presentation of
detailed study summary,
reference is made to
EFSA Administrative
guidance on submission
of dossiers and
assessment reports for
the peer-review of
pesticide active
substances (27 March
2019, doi:
10.2903/sp.efsa.2016.EN
-1612).

Appendix 2: The process of articles selection

Appendix 3: ORIGINAL SEARCH QUERY - Part 0
