

AFRICAN SWINE FEVER

Don't be the carrier of a deadly pig disease

African swine fever (ASF) is not a danger to humans but kills domestic and wild pigs. There is no vaccine against it.

The virus is highly resistant to heat, is persistent and is in pork products.

Carelessness can spread the disease.

COMMERCIAL PIG FARMS

Strengthen your biosecurity measures on your farm.

PIG FARMERS

Take measures in your backyard and at the market, to protect your pigs and your neighbours' pigs from the risk of ASF.

HUNTERS

During hunting trips, especially in places considered at risk of ASF, make sure you disinfect your equipment before leaving the hunting area.

TRAVELLERS

Do not carry the ASF virus by transporting pigs or carrying pork products.

TRANSPORT AUTHORITIES AND CHECK POINT STAFF

Know the countries infected with ASF and systematically check for travellers carrying animals or animal products, in particular pigs or pork products.
