

Terms of Use

In principle, this document summarizes livestock infectious disease surveillance and other activities conducted in the fiscal year 2023 (April 1, 2023 to March 31, 2024). Since some disease outbreaks and surveillance results are required to be reported on a fiscal year basis, while others are required to be reported on a calendar year basis, the charts, including figures and tables in this report, are aggregated based on either the fiscal year or the calendar year, depending on the item. Please note that charts aggregated on a calendar year basis are marked with “year”, and charts aggregated on a fiscal year basis are marked with “fiscal year.”

Please also check Ministry of Agriculture, Forestry and Fisheries (MAFF) website for the latest information on disease outbreaks. The URLs and QR codes of the websites mentioned in this document are current as of the publication of this report and may be changed or deleted in the future.

CONTENTS

Preface	2
Special Feature 1 Highly pathogenic avian influenza outbreaks for four consecutive seasons	7
Special Feature 2 Countermeasures against Johne's Disease	11
1 Occurrence of animal infectious diseases in Japan	17
2 Domestic animal infectious disease surveillance	21
2-1 Brucellosis	21
2-2 Tuberculosis	22
2-3 Johne's disease	23
2-4 Bovine spongiform encephalopathy	25
2-5 Transmissible spongiform encephalopathy	26
2-6 Classical swine fever	27
2-7 African swine fever	30
2-8 Highly pathogenic and low pathogenic avian influenza	31
2-9 Arbovirus infection in cattle	32
COLUMN:Animal husbandry and hygiene standards in Japan	37
2-10 Other surveillance	39
Appendixes	42
1. Relevant laws	43
2. List of Domestic animal infectious diseases	44
3. List of Notifiable infectious diseases	45
4. Animal health systems in Japan	47
