Abstract: A total of 86 platypodid species found in logs from Borneo at Nagoya Port are listed. Details of the host records for the present collection are given.

Key words: Platypodidae, Borneo, ecology, plant quarantine, host

Introduction

This report is continued from the preceding paper "The Scolytidae and Platypodidae (Coleoptera) from Borneo found in logs at Nagoya Port I", and platypodid species are listed in this paper.

More than 50,000 specimens of Platypodidae consisting of 86 species of 8 genera were collected by plant inspectors of Seibu Sub-Branch from April 1982 to March 1987.
